

Let's talk structure

the positive consequences of
structural representations of
social categories

Marianna Zhang

3rd year PhD student

Devo brownbag
5.19.2021

We structure the social world using categories.

how *do* we represent
social categories?

essentialism

Category members share some internal **essence**

that causes typical category properties.

essentialism

biological

group
properties

Category members share some
internal **essence**
(often cached out as shared biology)
that causes typical category properties.

essentialism

biological
women

properties
associated w
women

Category members share some
internal **essence**
(often cached out as shared biology)
that causes typical category properties.

essentialism

Category members share some internal **essence**
(often cached out as shared biology)
that causes typical category properties.

problematic consequences:

- 1) *what is the case*
 - group-based generalization (stereotyping)
- 2) *what should be the case*
 - group properties seen as natural and just, counter-stereotypical examples seen as “wrong”

...

1) Taylor, Rhodes & Gelman (2009), 2) Levy et al. (1995)
a review: Rhodes & Moty (2020)

how *should* we represent
social categories?

essentialism

biological

Category members share a
stable external context.

Asian-Americans

Yuji Ichioka, founding of the Asian American Political Alliance, UC Berkeley (1968)

1) Could structural representations be a **more positive** alternative to essentialism?

1) Could structural representations be a **more positive** alternative to essentialism?

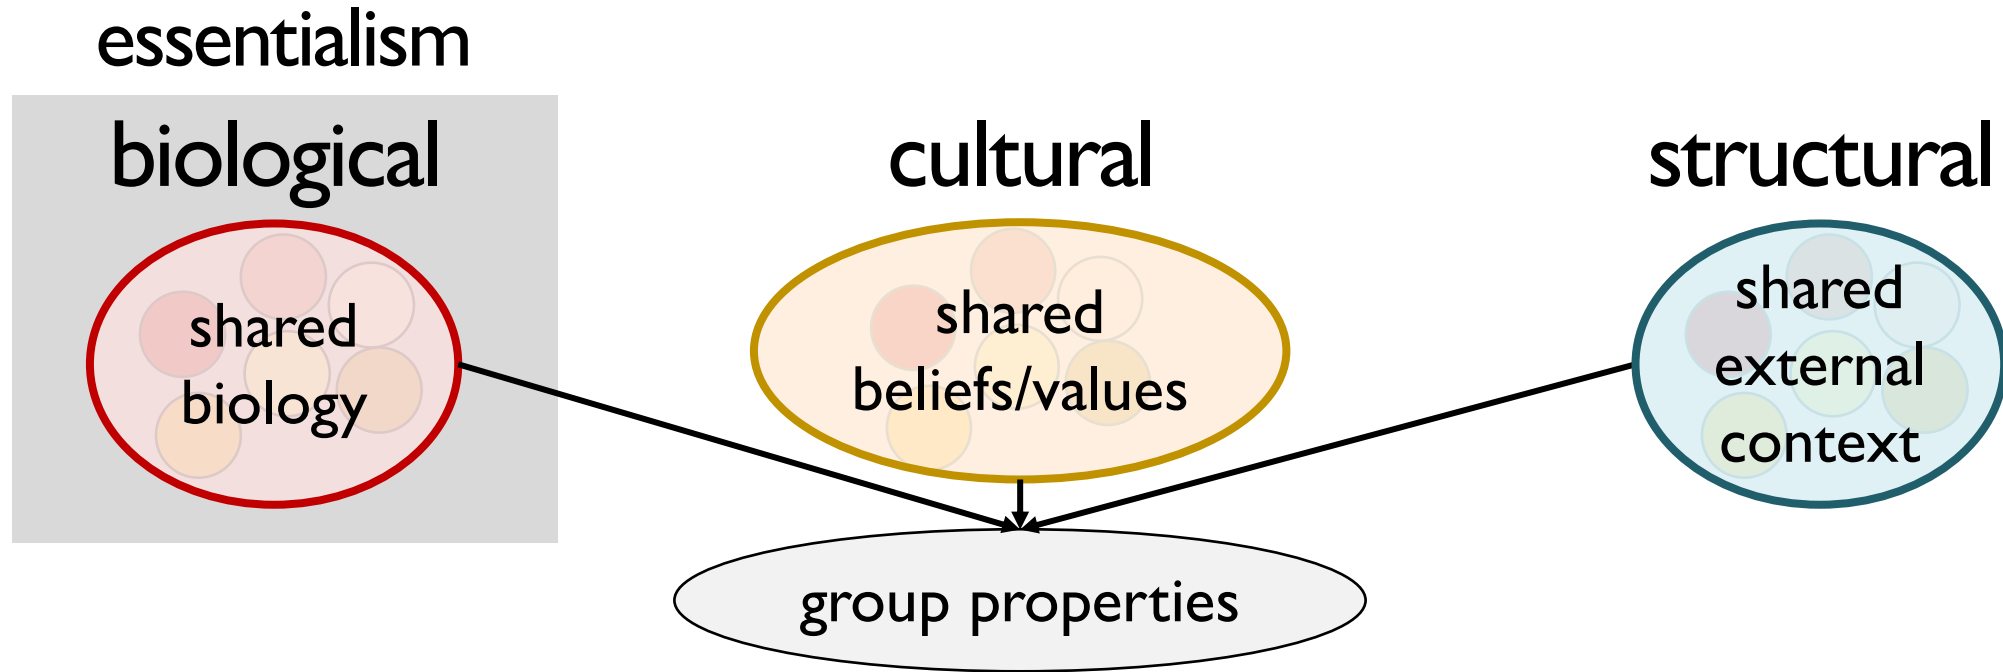

problematic consequences:

- 1) *what is the case*
 - group-based generalizations (stereotyping)
- 2) *what should be the case*
 - justifies properties as natural and normative

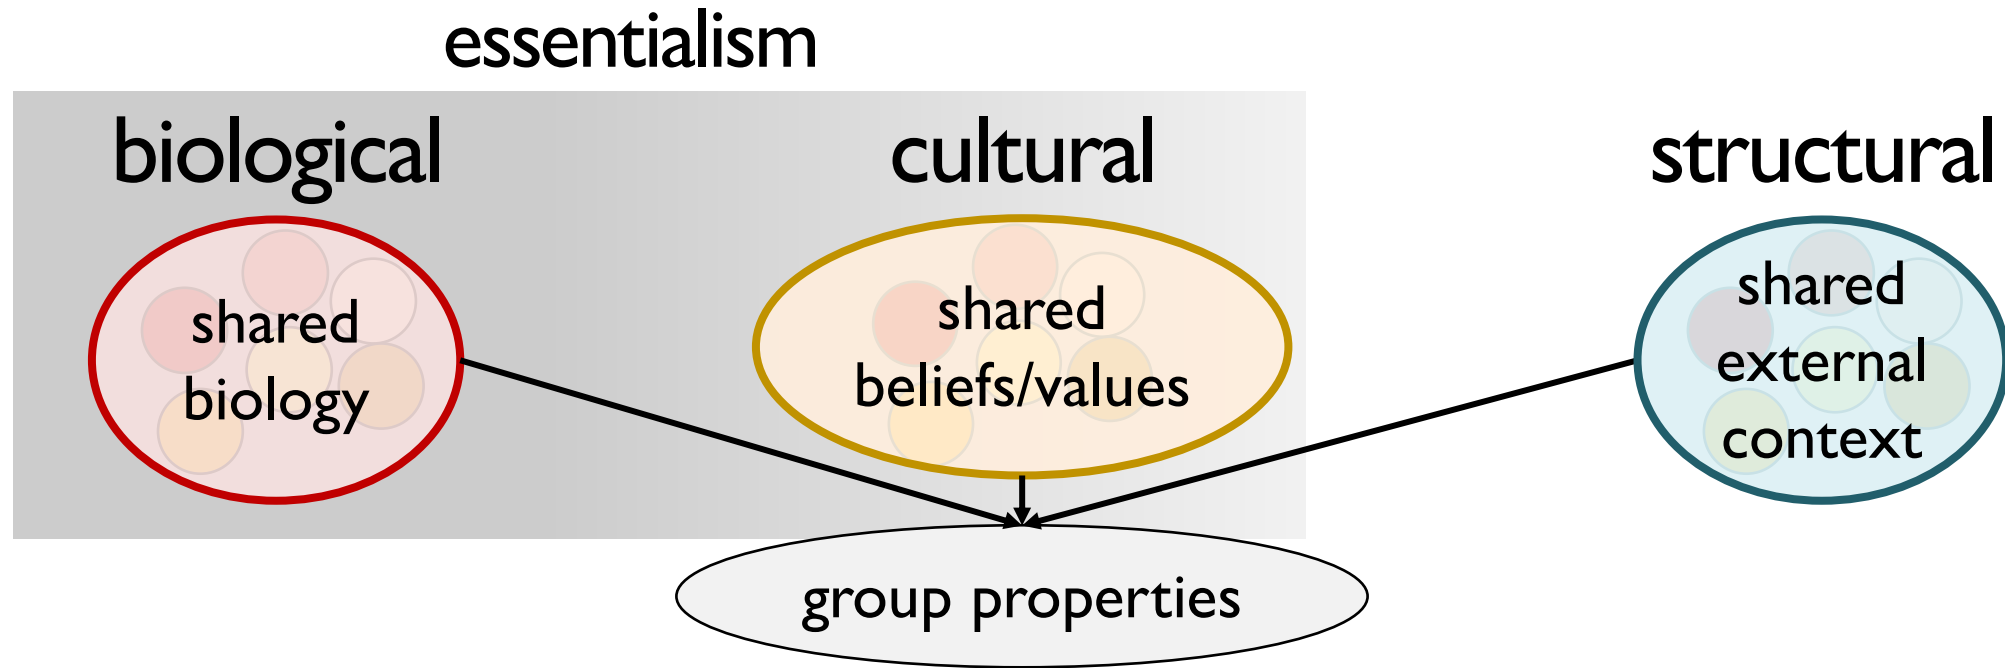

better consequences?

- 1) *what is the case*
 - **context-based generalizations**
- (Vasilyeva et al, 2019/2020)

2) Where does characterizing a group in terms of **group culture** fit in?

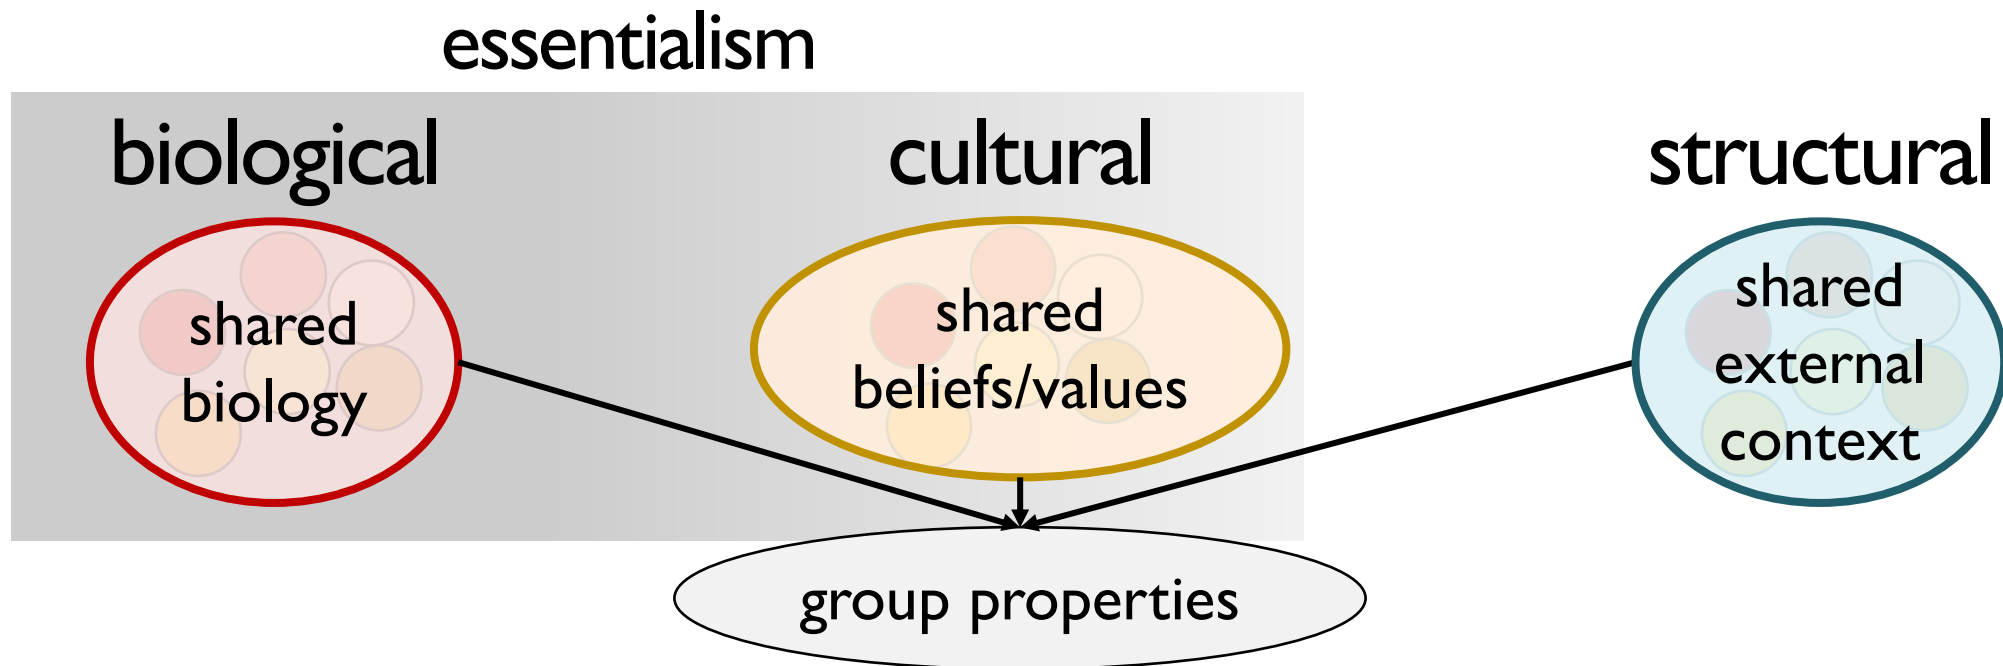

2) Where does characterizing a group in terms of **group culture** fit in?

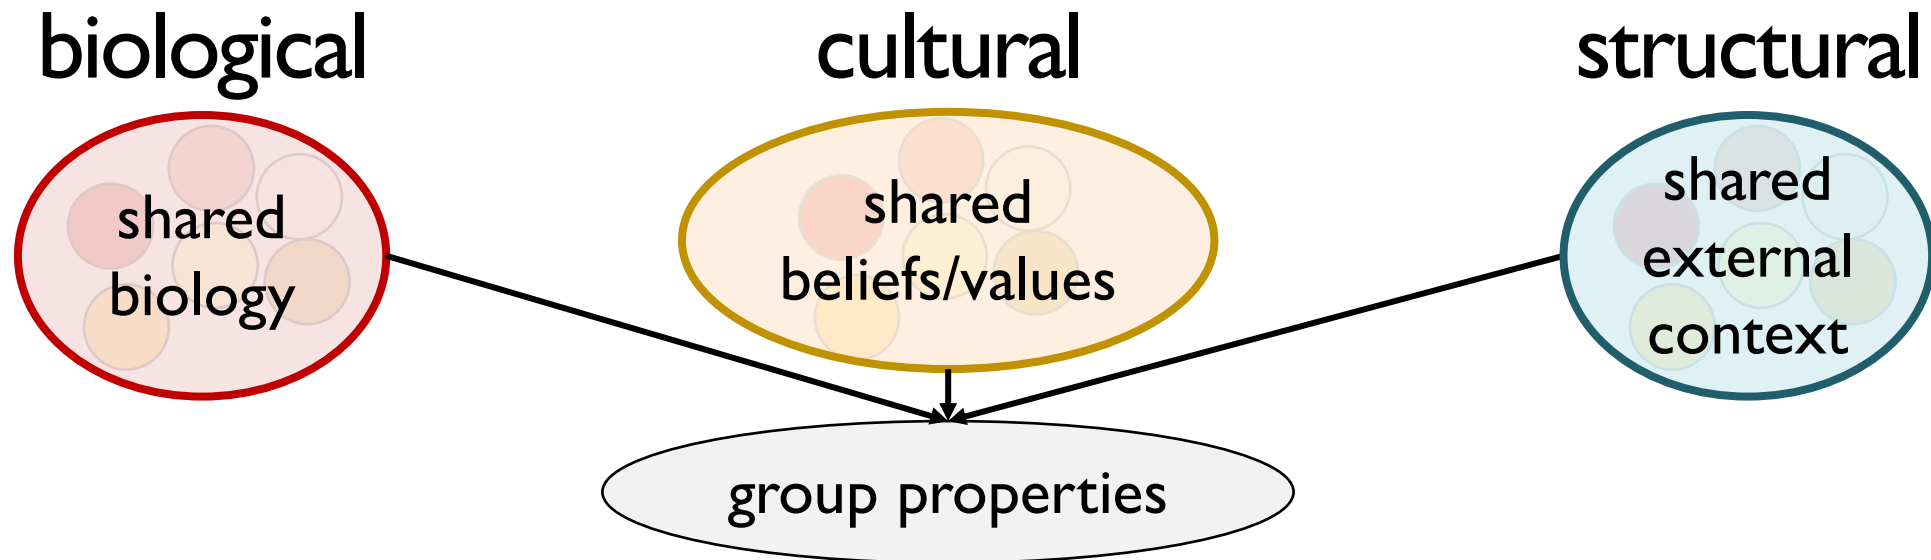

1) Could structural representations be a **more positive** alternative to essentialism?

2) Where does characterizing a group in terms of **group culture** fit in?

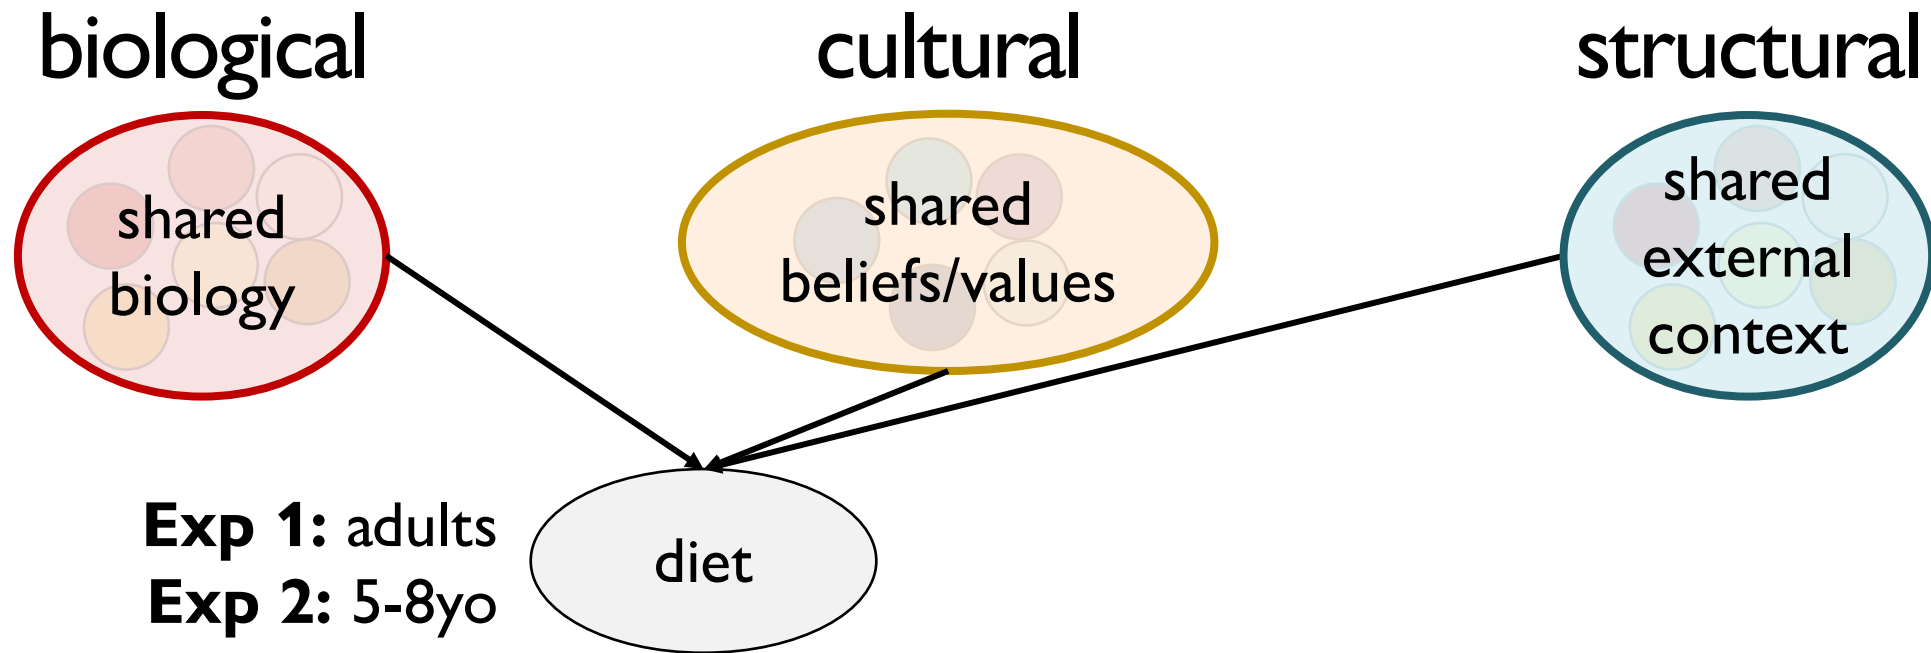

induce one of these representations...

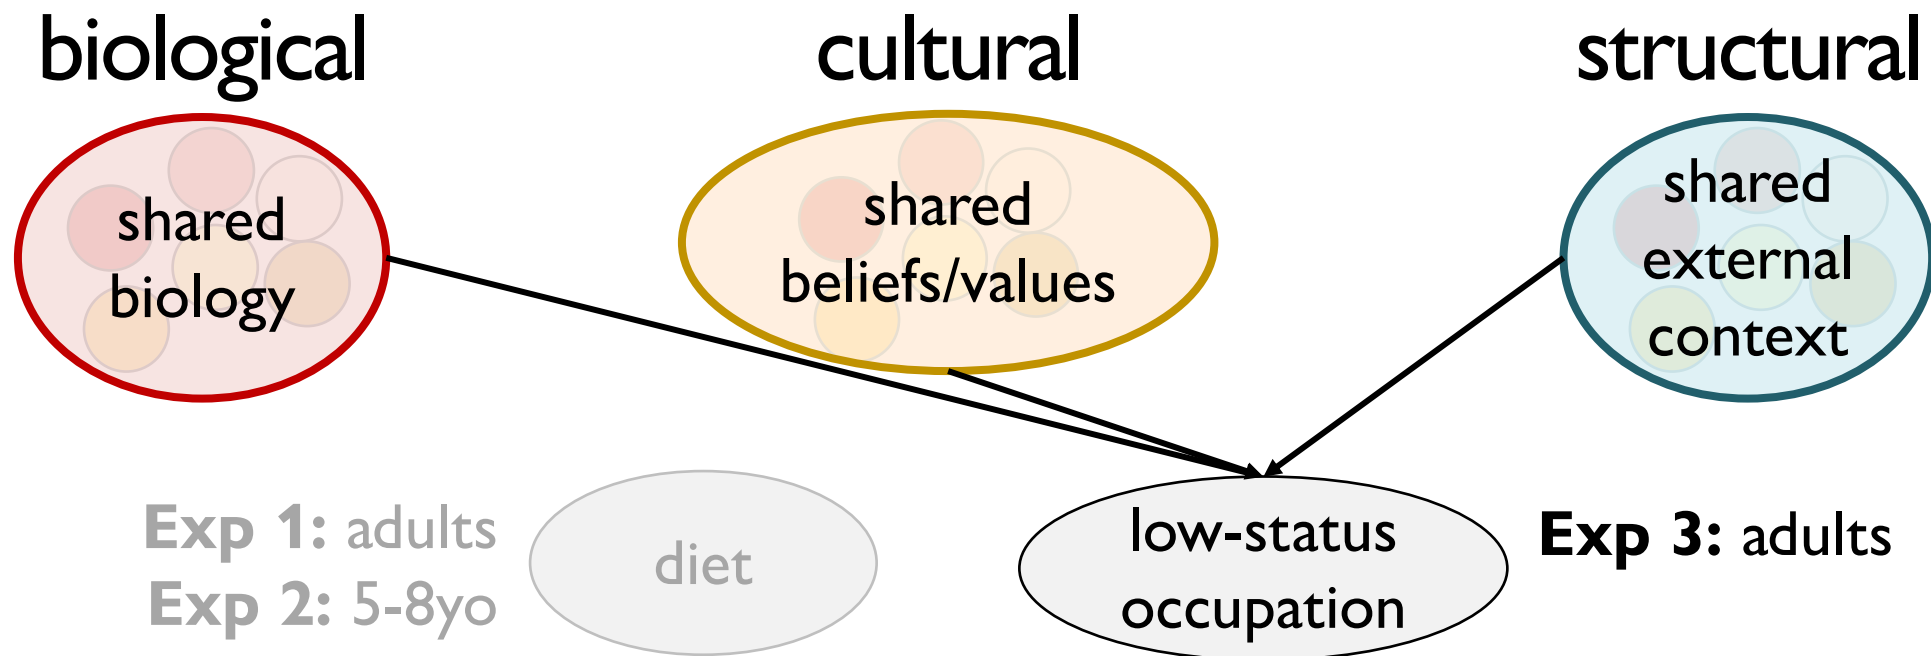

induce one of these representations...

induce one of these representations...

induce one of these representations...

biological

cultural

structural

look at their different consequences...

1) what is the case

- generalize based on group vs context

2) what should be the case

- attitudes towards non-conformity
- attitudes towards present disparities

3) how to change what is the case

- intervene on group vs context

group diet

adults

5-8yo

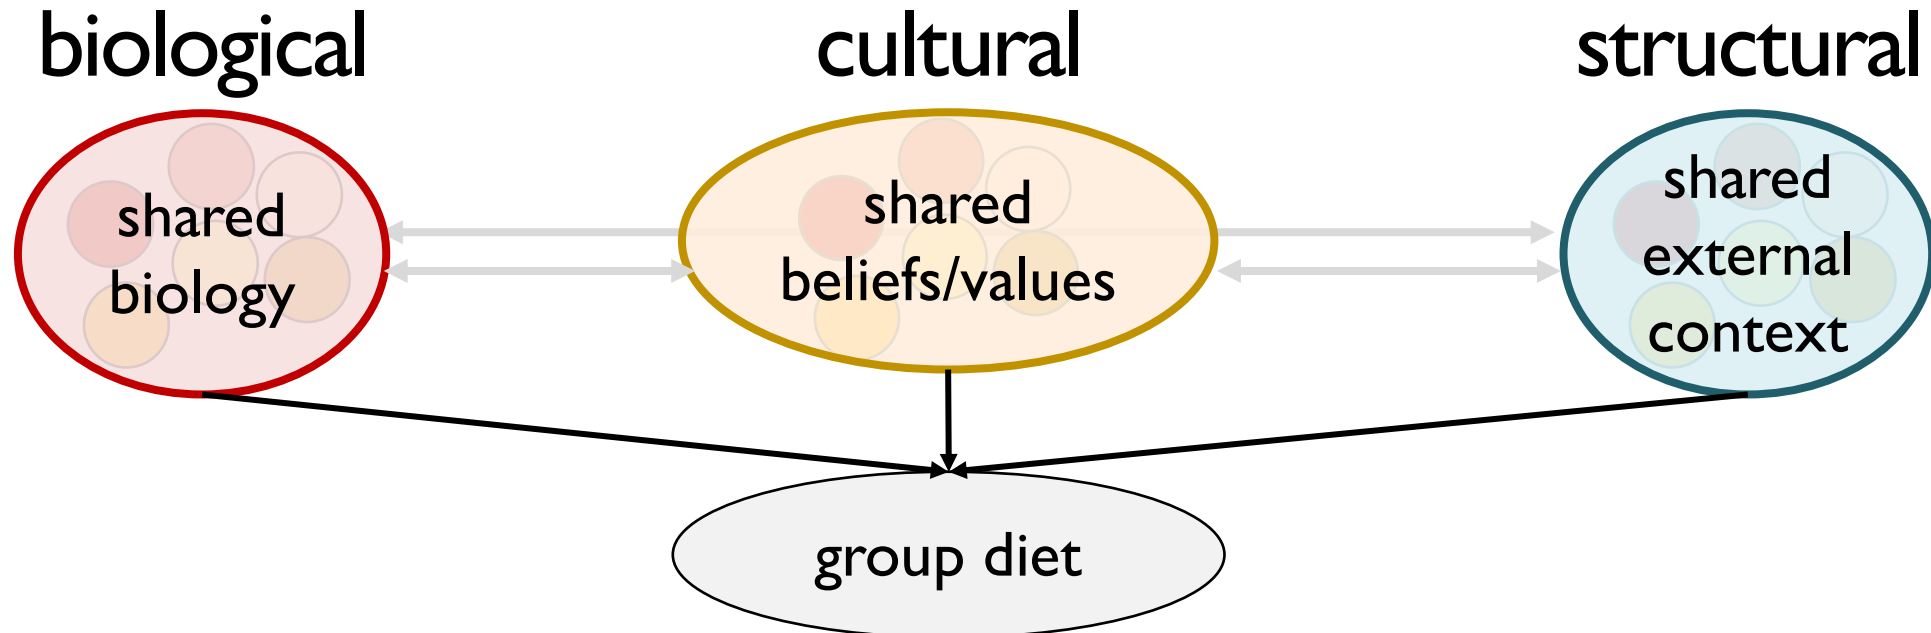

Why does a group have a certain diet?

type in
the chat!

East Asian people & lactose
intolerance (LCT gene for lactase)
“Our bodies best digest...”
(folk biology)

religious beliefs
(eg vegetarian, halal, kosher)

Northern Chinese & noodles
Southern Chinese & rice
(climate for growing rice vs wheat)

Why does a group have a certain diet?

group has characteristic **physiology** that make some foods **suitable or not suitable to eat**

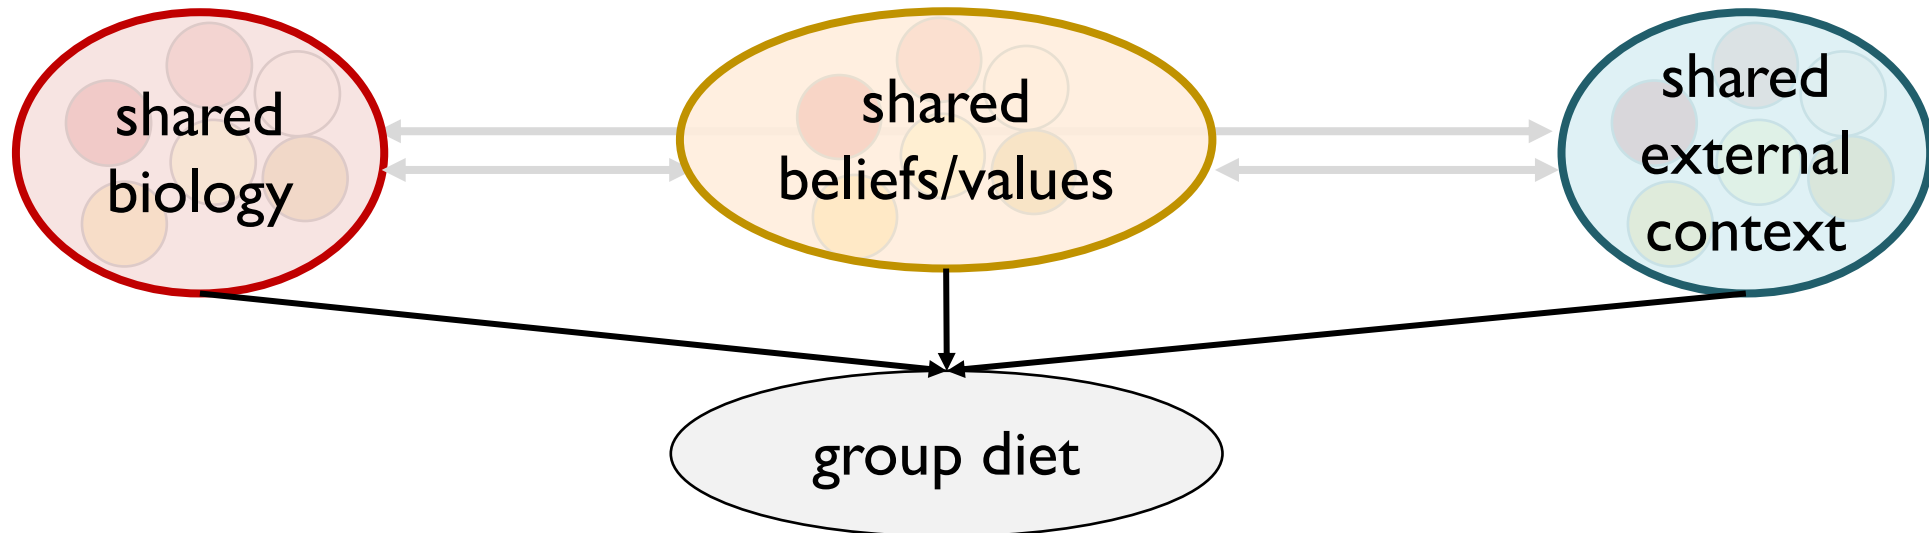

group has characteristic **shared beliefs, values** that make some foods **taboo**

group's **environment** makes some foods **available or not available**

allergies / intolerance

taboo food restrictions

what grows where

*group labels, pictures, berries counterbalanced for 5-8yo

Zarpies

Vawns

Exp 1: adults (n=167, ~55/condition)

Exp 2: 5-8yo (n=67, ~22/condition)

*group labels, pictures, berries counterbalanced for 5-8yo

Zarpies live on this side of the planet.
Zarpies eat starberries.

Vawns live on the other side of the planet.
Vawns eat roundberries.

Exp 1: adults (n=167, ~55/condition)

Exp 2: 5-8yo (n=67, ~22/condition)

*group labels, pictures, berries counterbalanced for 5-8yo

Zarpies live on this side of the planet.
Zarpies eat starberries.

Vawns live on the other side of the planet.
Vawns eat roundberries.

Because of the way their
bodies work, other berries
make them sick, so ...

allergies / intolerance

...Zarpies eat starberries.

Because they believe eating
other berries is bad luck, ...

taboo food restrictions

group diet

Because starberries are the
only berries that grow in
the area where they live, ...

what grows where

Exp 1: adults (n=167, ~55/condition)

Exp 2: 5-8yo (n=67, ~22/condition)

look at their different consequences...

presented in
fixed order: 2, 1, 3

1) what is the case

- generalize based on group vs context

2) what should be the case

- attitudes towards non-conformity

3) how to change what is the case

- intervene on group vs context

Exp 1: adults (n=167, ~55/condition)

Exp 2: 5-8yo (n=67, ~22/condition)

structural representations could lead to...

1) *what is the case*

generalize based on context vs group

2) *what should be the case*

**less negative attitudes about
non-conformity**

3) *how to change what is the case*

intervene on context vs group

Exp 1: adults (n=167, ~55/condition)

Exp 2: 5-8yo (n=67, ~22/condition)

what is the case: generalization

Look, here's another Zarpie... lives **on the other side of the planet**.

Which berries do you think this Zarpie eats?

(starberries/roundberries → for sure/maybe)

5-8yo

(n=67, ~22/condition)

adults

(n=167, ~55/condition)

modeled on switched-at-birth tasks from essentialism:
e.g. Gelman & Wellman (1991)

structural reps: context-sensitive generalization in adults

Look, here's another Zarpie... lives **on the other side of the planet**.

Which berries do you think this Zarpie eats?

(starberries/roundberries → for sure/maybe)

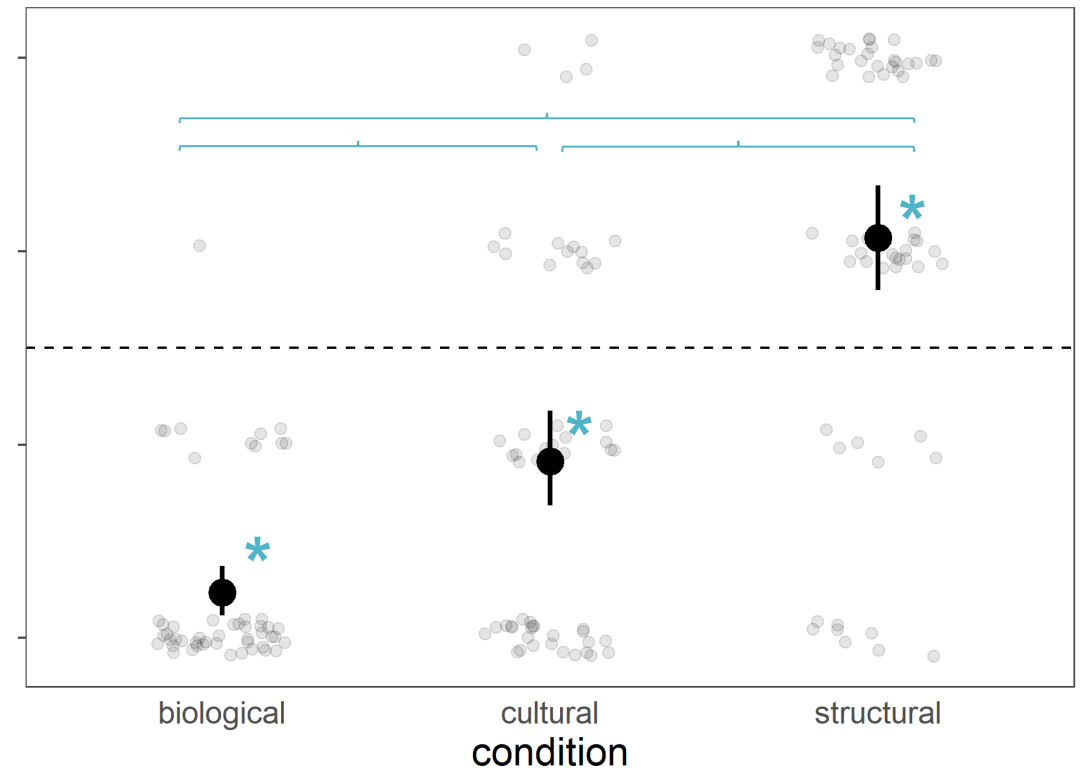

5-8yo

(n=67, ~22/condition)

adults

(n=167, ~55/condition)

main effect of condition (controlling for difficulty of intervention) for adults, not 5-8yo

— = statistically significant diff (FDR-corrected)

* = statistically significant diff. from midpoint (one-sample t-test)

● = 95% bootstrap CIs

○ = individual participants

what should be the case: attitudes about non-conformity

Look, this Zarpie is eating **roundberries**!

Is it **okay or not okay** for this Zarpie to eat roundberries?

(okay/not okay → a little/pretty/very good or bad)

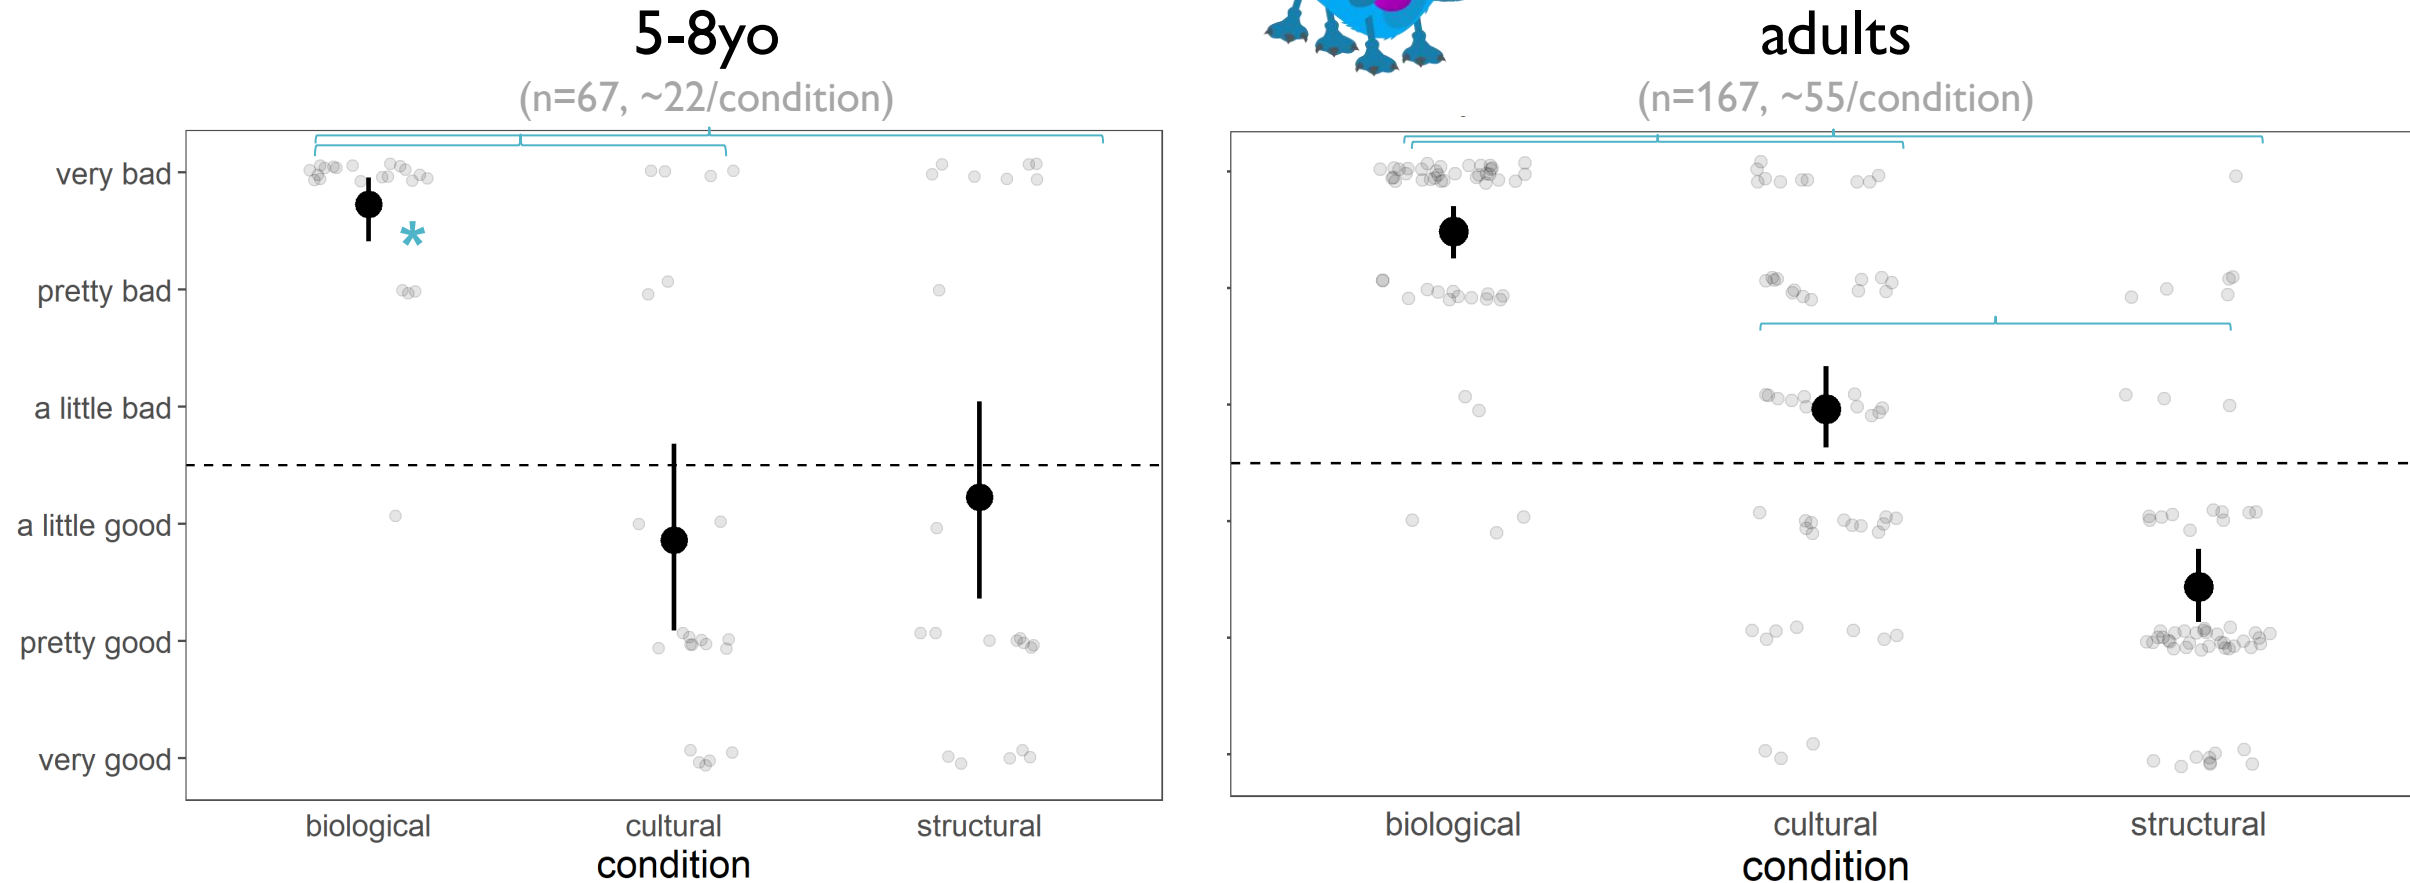

same measure from:

Roberts, Gelman & Ho (2016), Roberts, Ho & Gelman (2017)

structural reps: less negative attitudes about non-conformity

Look, this Zarpie is eating **roundberries**!
Is it **okay or not okay** for this Zarpie to eat roundberries?
(okay/not okay → a little/pretty/very good or bad)

main effect of condition (controlling for difficulty of intervention) in both groups

— = statistically significant diff (FDR-corrected)

* = statistically significant diff. from midpoint (one-sample t-test)

● = 95% bootstrap CIs

○ = individual participants

how to change what is the case: intervention

storm blew away starberries (5-8yo) / starberry harvest failed this year (adults)

We'll need to get the Zarpies to eat roundberries instead.

If you could make anything happen, **what could we do** (5-8yo) / **what would you do** (adults),
so that the Zarpies can eat roundberries? (open-ended)

intervention coding

If you could make anything happen, **what could we do** (5-8yo) / **what would you do** (adults),
so that the Zarpies can eat roundberries? (open-ended → 2 independent coders blind to condition)

5-8yo

(85% agreement, $\kappa = 0.81$)

adults

(94% agreement, $\kappa = 0.92$)

change group biology

give them a pill or medicine
have them eat a little at a time

give them a pill or medicine
have them build tolerance

change group beliefs/culture

tell them the berries are good luck

convince them it's not bad luck

change environment
(increase food access)

get them roundberries from other side
ask the Vawns to share roundberries

grow, plant, or import the other berry
have them visit the other side of the planet

change the food

turn them into starberries
take the stuff they can't eat out

prepare the berries so they are safe to eat

other

find more starberries
do nothing

don't know

structural reps: interventions on structural context

If you could make anything happen,
what could we do (5-8yo) / what would you do (adults)
so that the Zarpies can eat roundberries?

target of intervention differs across conditions (Fisher's exact test) in both groups

* = main effect of condition on __ interventions, controlling for difficulty of intervention

— = statistically significant diff. (FDR-corrected)

difficulty of intervention was controlled for in other analyses

Would it be easy or hard to do that? (5-8yo) (easy/hard → very/a little)

How easy or difficult would it be to do the action you suggested above? (adults) (easy/difficult → very/somewhat)

difficulty of intervention was controlled for in other analyses

Would it be easy or hard to do that? (5-8yo) (easy/hard → very/a little)

How easy or difficult would it be to do the action you suggested above? (adults) (easy/difficult → very/somewhat)

5-8yo

(n=67, ~22/condition)

adults

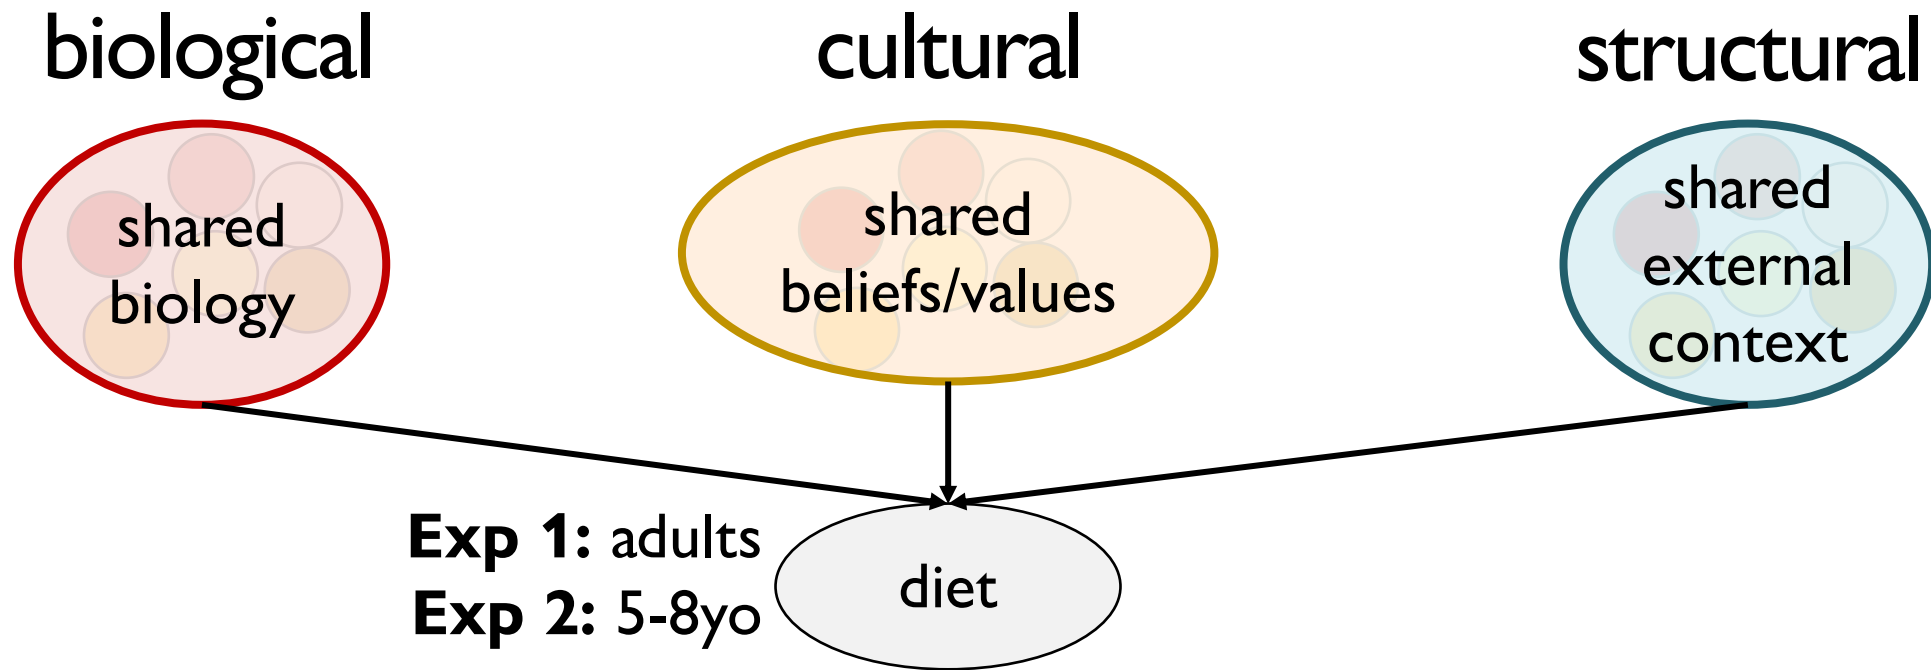

(n=167, ~55/condition)

● = 95% bootstrap CIs

○ = individual participants

no main effect of condition for either 5-8yo or adults

structural representations lead to:

what is the case

context-sensitive generalization (for adults)

what should be the case

**less negative attitudes about
non-conformity**

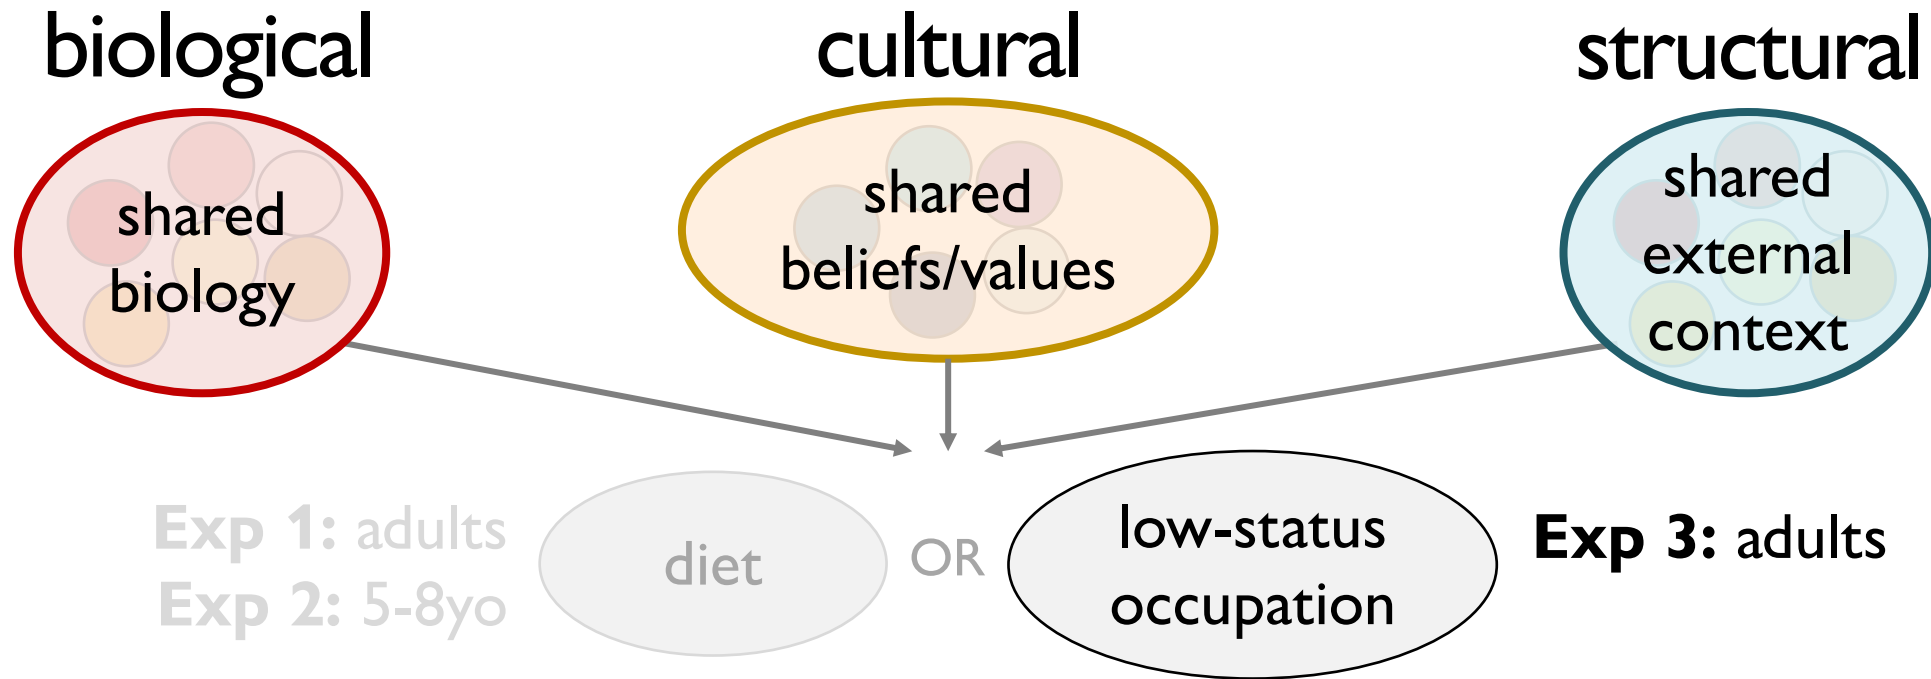

how to change what is the case

interventions on structural context

group
low-status occupation

adults

induce one of these construals...

look at their different consequences...

what is the case

generalize based on group vs context

how to change what is the case

intervene on group vs structural conditions

what should be the case

attitudes towards non-conformity

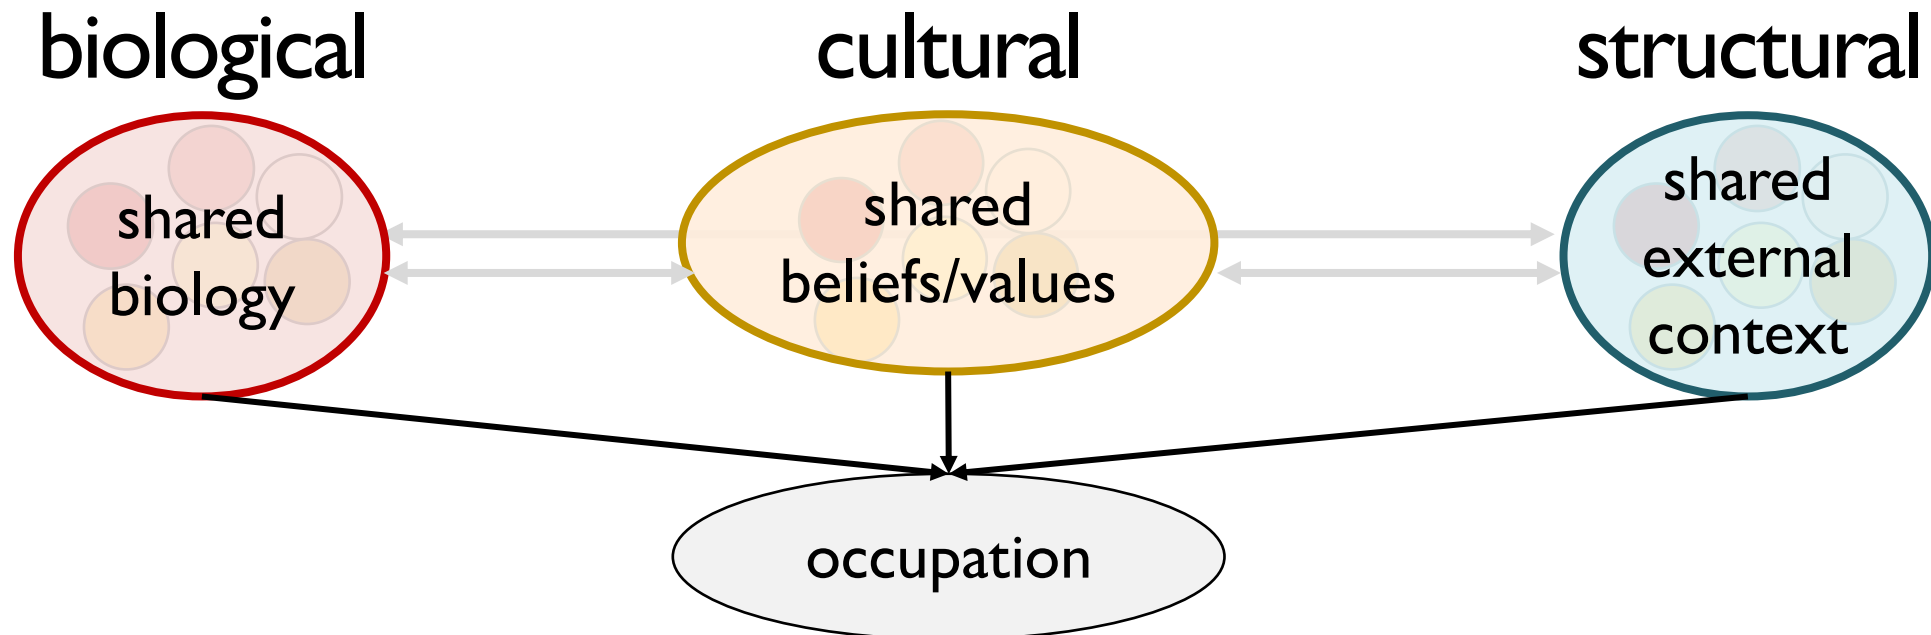

attitudes towards present disparities

Why does a group have a certain occupation?

women & factory work
("nimble fingers",
also "detail-oriented", "docile")

Jews & banking
("stingy", "greedy",
"materialistic")

Chinese-Americans &
restaurants (language barrier,
limited resources, stereotyping,
economic discrimination)

Why does a group have a certain occupation?

group has characteristic **physiology or biological traits** that make them suited to the job

group has characteristic **shared beliefs, values, traditions** that match the job

group faces **barriers, constraints, economic discrimination** that leaves them with few other options than the job

biological

cultural

structural

Vawns work as managers at a food distributing company.

Vawns sell and ship a variety of food grown on the island, including aquafruit and many other kinds of fruit and foods.

Vawns earn a **comfortable wage** working as distribution managers. Working as a distribution manager is a relatively **low risk** job.

Zarpies work as aquafruit farmers.

Aquafruit are fruit that grow underwater off the coast of islands in this area.

Zarpies dive into the ocean near the island to harvest aquafruit. Zarpies are **paid very little** for harvesting aquafruit. Harvesting aquafruit can also be **dangerous**, because there are many sharks in the water.

occupation

low-status
occupation

Zarpies work as aquafruit farmers, and don't often work other jobs.

This is because Zarpies see better in the water than on land, their bodies are streamlined and powerfully built, and they have big hands and feet that are good for swimming, from even early in childhood. **Zarpies' bodies are well-suited to farming aquafruit.**

This is because Zarpies grow aquafruit by tradition, have passed down knowledge of how to farm aquafruit to their children for generations, and feel a special attachment to the ocean.

Zarpies' traditions and values are well-suited to farming aquafruit.

This is because Zarpies are required by this island's government to fill out complex and expensive paperwork to be hired in other jobs, which limits economic opportunities for Zarpies. **This situation leads Zarpies with little other choice than to farm aquafruit.**

what is the case: generalization

Look, here's another Zarpie! This Zarpie does not live on the island of Zarpies and Vawns. This Zarpie was born and raised in a different island country, with a different government, different employment policies, and different groups of people. They live and work in that different island country.

What job do you think this Zarpie works in their country?

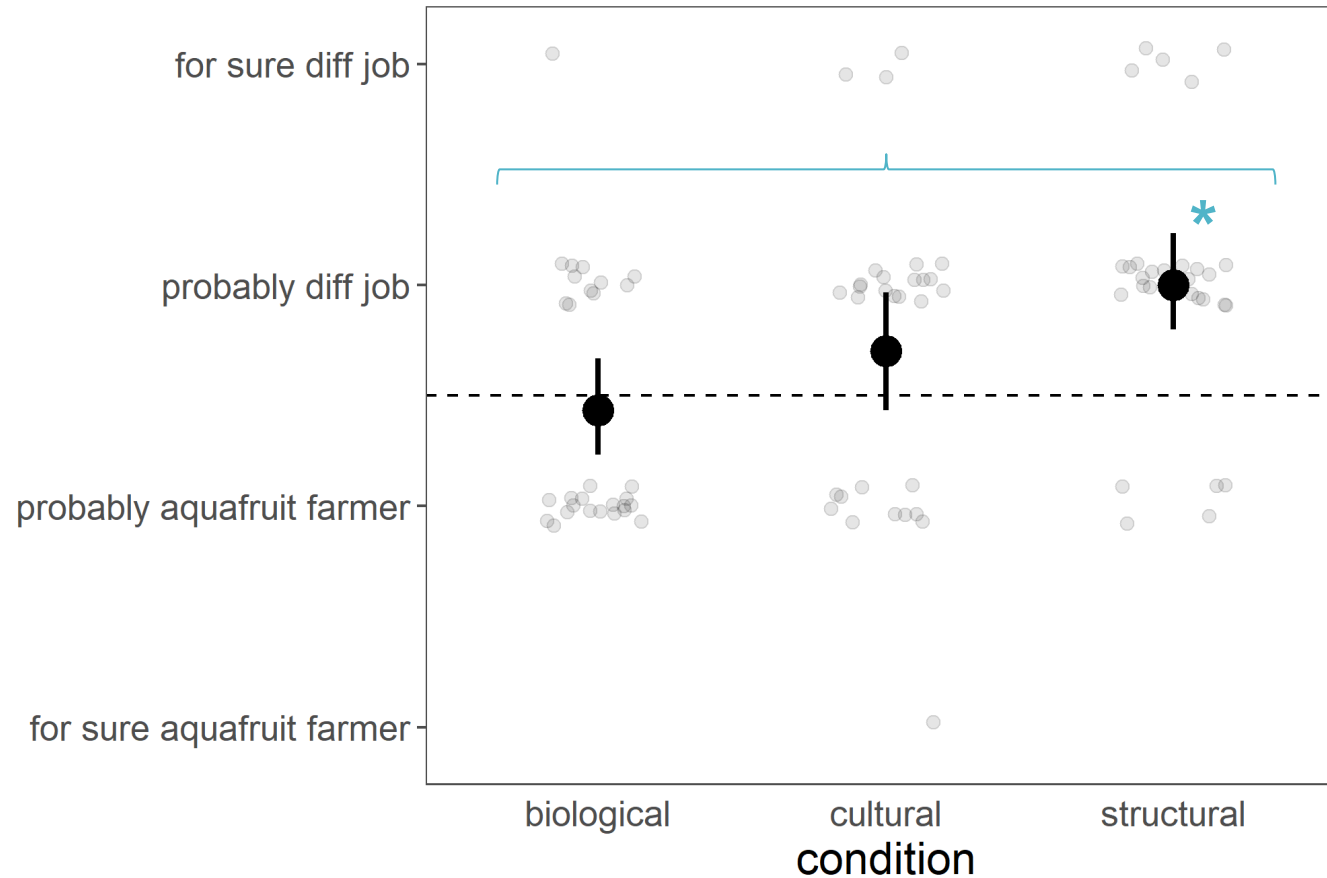

◆ = 95% bootstrap CIs
N = 90 adults on MTurk
30/condition

structural reps: more context-sensitive generalization

Look, here's another Zarpie! This Zarpie does not live on the island of Zarpies and Vawns. This Zarpie was born and raised in a different island country, with a different government, different employment policies, and different groups of people. They live and work in that different island country.

What job do you think this Zarpie works in their country?

main effect of condition (controlling for difficulty of intervention)

— = statistically significant diff (FDR-corrected)

* = statistically significant diff. from midpoint (one-sample t-test)

● = 95% bootstrap CIs

N = 90 adults on MTurk

30/condition

what should be the case: attitudes about present disparities

Is it okay or not okay that Zarpies mostly work as aquafruit farmers and Vawns mostly work as distribution managers?

(okay/not okay → a little/pretty/very, very good or bad)

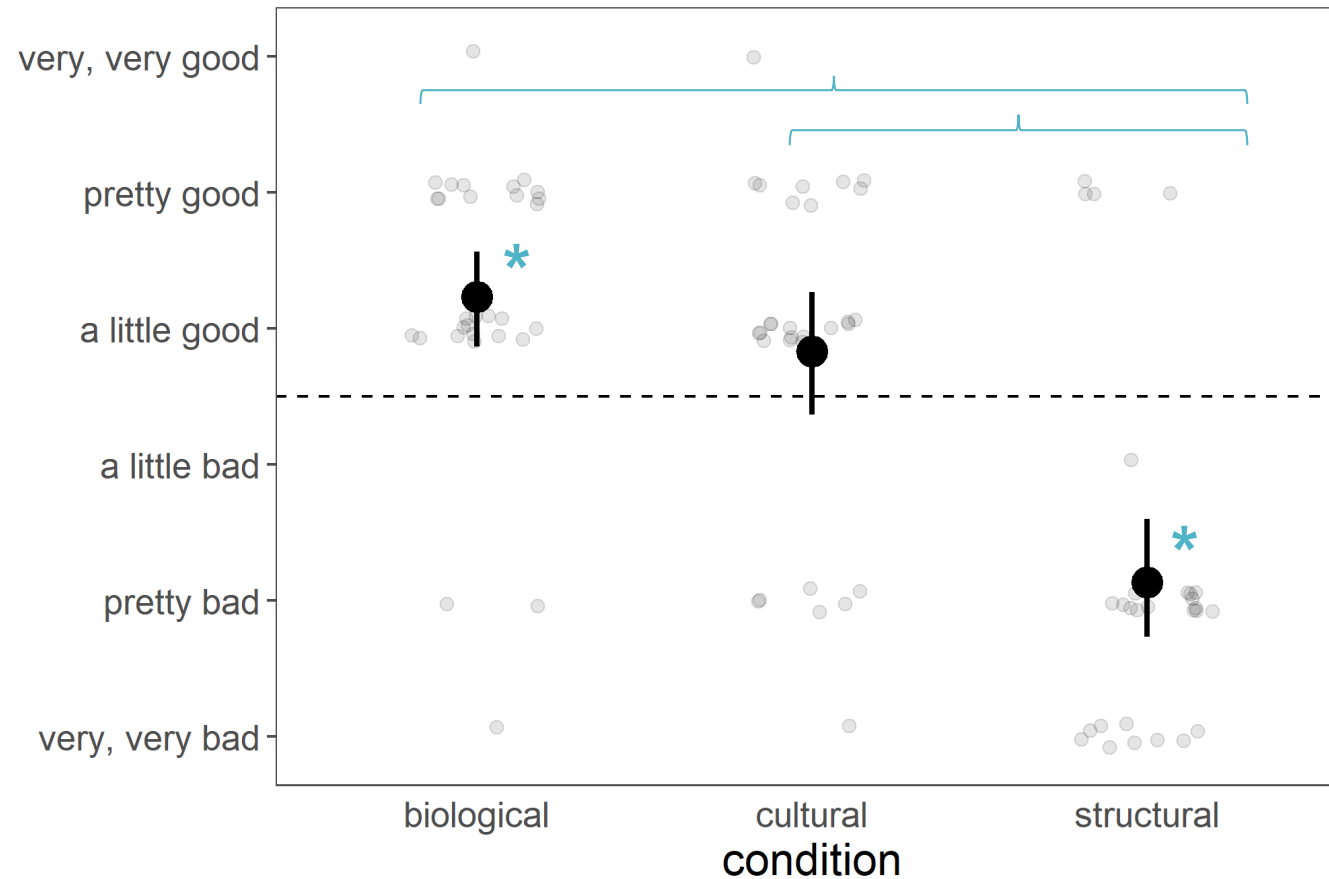

◆ = 95% bootstrap CIs
N = 90 adults on MTurk
30/condition

structural reps: more negative attitudes about group disparities

Is it okay or not okay that Zarpies mostly work as aquafruit farmers and Vawns mostly work as distribution managers?

(okay/not okay → a little/pretty/very, very good or bad)

main effect of condition (controlling for difficulty of intervention)

— = statistically significant diff (FDR-corrected)

* = statistically significant diff. from midpoint (one-sample t-test)

● = 95% bootstrap CIs
N = 90 adults on MTurk
30/condition

how to change what is the case: intervention

The island government would like to get more Zarpies to work as distribution managers, rather than aquafruit farmers. **If you could make anything happen, what would you do to get the Zarpies to work as distribution managers?** Please list 1 specific action you would do, and please be as specific as possible. The more specific you can be, the better. What would you do/change and how?

intervention coding

If you could make anything happen, what would you do to get the Zarpies to work as distribution managers? (open-ended → 2 independent coders blind to condition)

adults

(79% agreement, $\kappa = 0.72$)

targeting group:

 change group biology

 change group beliefs/culture

targeting structural context:

 provide job training to group

 create more jobs or access to jobs

not analyzed:

 change job wages, value, hours, work

 other

give them goggles to see on land

persuade them by saying it's lower risk
tell them it's a more desirable job

provide free training, education
equip them with needed knowledge and skills

remove paperwork requirement, legal barriers
enact affirmative action hiring policy

provide incentives for taking the job
increase the pay rate of jobs
let them work less

switch jobs with Vawns
wouldn't change anything

N = 90 adults on MTurk
30/condition

structural reps: interventions on structural conditions

The island government would like to get more Zarpies to work as distribution managers, rather than aquafruit farmers. **If you could make anything happen, what would you do to get the Zarpies to work as distribution managers?** Please list 1 specific action you would do, and please be as specific as possible. The more specific you can be, the better. What would you do/change and how?

social categories?

essentialism

biological

Category members share a
stable external context.

structural

from simple to complex causal systems with interacting causes
(because that may be closer to the ground truth)

...the most common occupations among Indian women are software developers and physicians—two typically high-wage occupations—while the top occupations among Vietnamese women are manicurists and hairdressers, which are typically low-wage occupations.

Some factors driving these differences among subpopulations may include cultural differences, differences in immigration patterns and generational wealth, and persistent biases around gender, race, ethnicity, nationality, and language.

Center for American Progress (2021). *The Economic Status of Asian American and Pacific Islander Women*.
