

Let's talk structure

the positive consequences of
structural representations of
social categories

Marianna Zhang

PhD student in Psychology
Stanford University

Leonard Learning Lab
10.12.2021

We structure the social world by categorizing people into groups.

how *do* we represent
differences between groups?

essentialism

Category members share some internal **essence**

that causes typical category properties.

essentialism

biological

group
properties

Category members share some
internal **essence**
(often cached out as shared biology)
that causes typical category properties.

internal **essence**
(often cached out as shared biology)
that causes typical category properties.

essentialism

Category members share some internal **essence**
(often cached out as shared biology)
that causes typical category properties.

problematic consequences:

- 1) *what is the case*
 - group-based generalization (stereotyping)
- 2) *what should be the case*
 - group properties seen as natural and just, counter-stereotypical examples seen as “wrong”

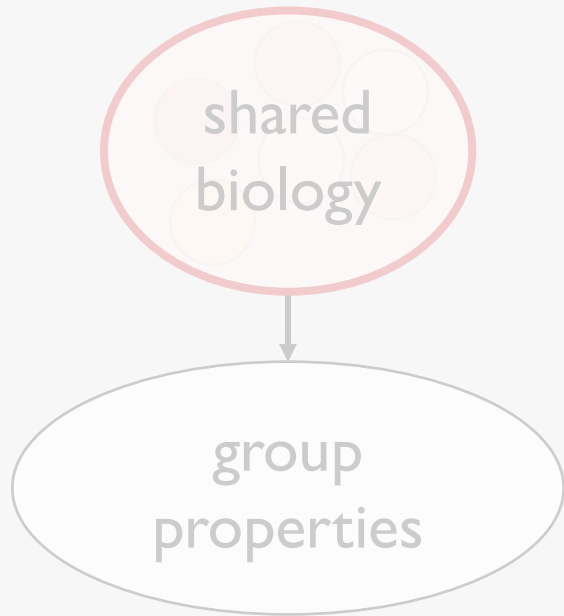

...

1) Taylor, Rhodes & Gelman (2009), 2) Levy et al. (1995)
a review: Rhodes & Moty (2020)

how *should* we represent
differences between groups?

essentialism

biological

Category members share a
stable external context.

Yuji Ichioka, founding of the Asian American Political Alliance, UC Berkeley (1968)

1) Could structural representations be a **more positive** alternative to essentialism?

1) Could structural representations be a **more positive** alternative to essentialism?

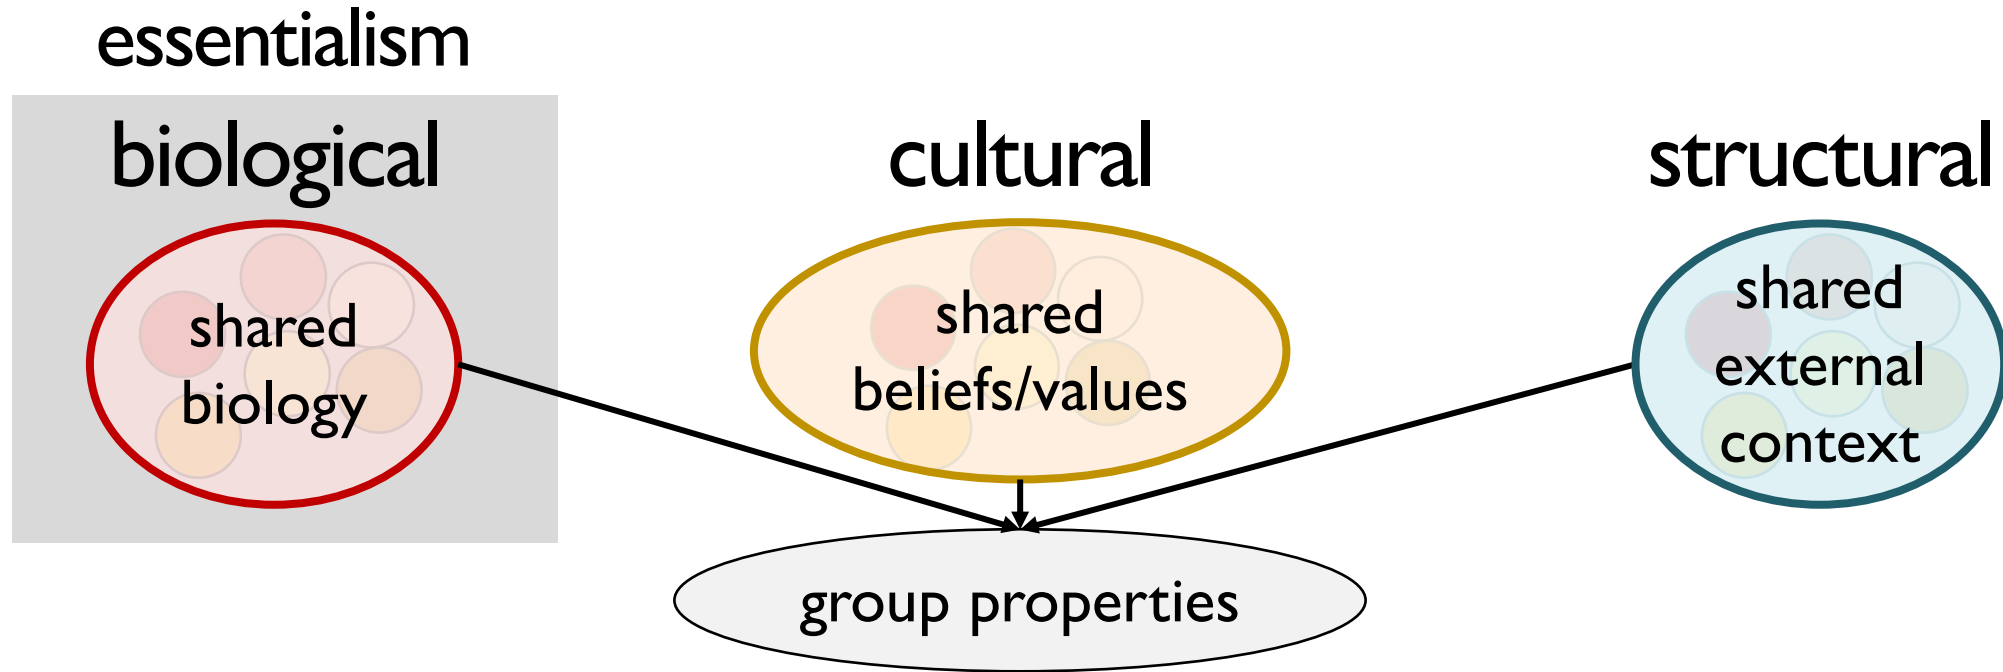

problematic consequences:

- 1) *what is the case*
 - group-based generalizations (stereotyping)
- 2) *what should be the case*
 - justifies properties as natural and normative

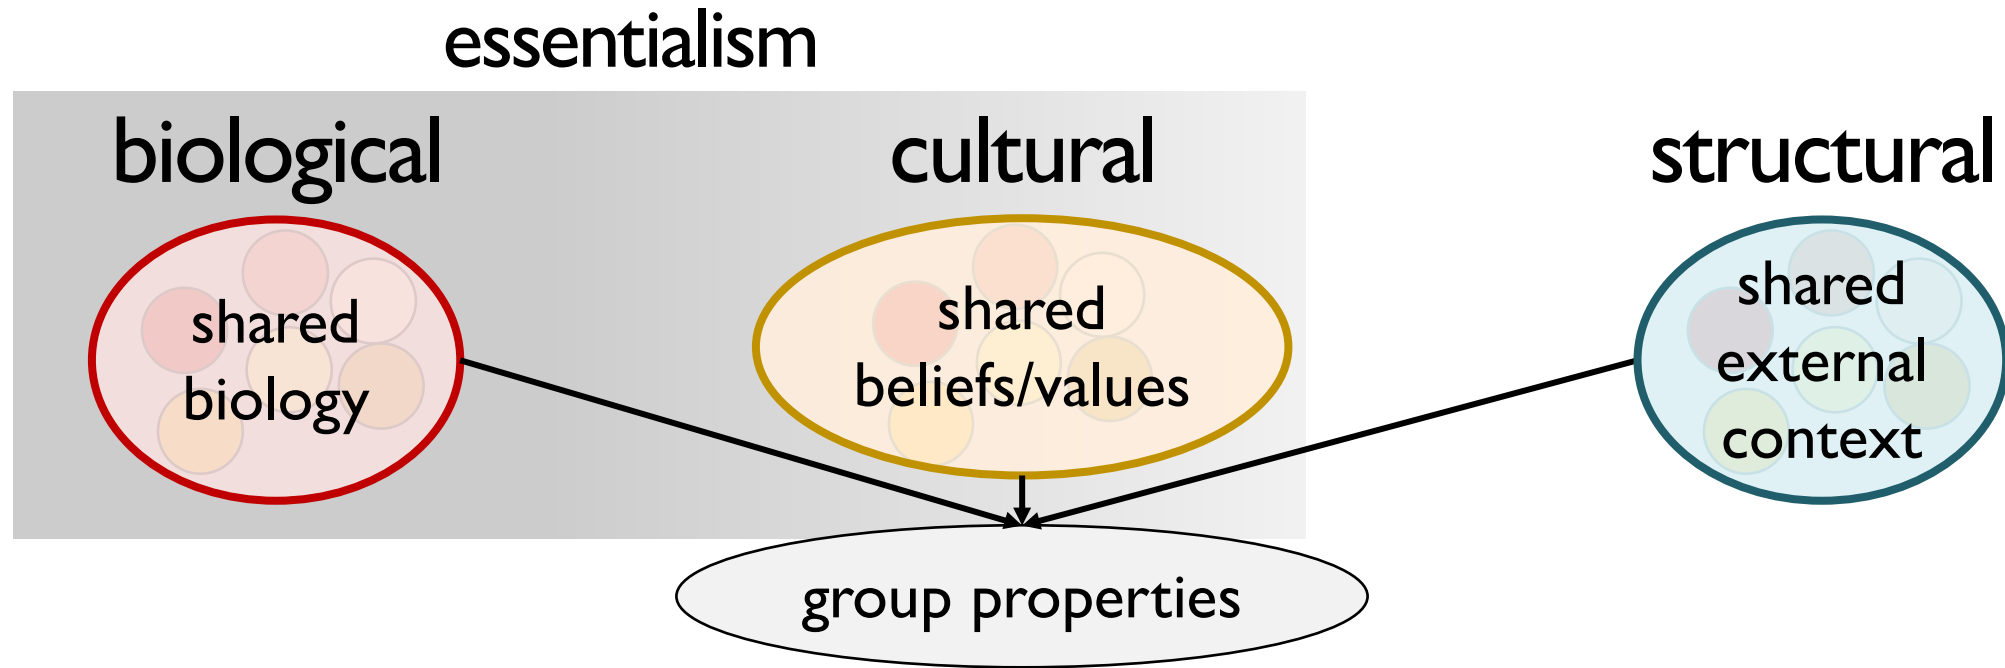

better consequences?

- 1) *what is the case*
 - **context-based generalizations**
- (Vasilyeva et al, 2019/2020)

2) Where does attributing properties to **group culture** fit in?

2) Where does attributing properties to **group culture** fit in?

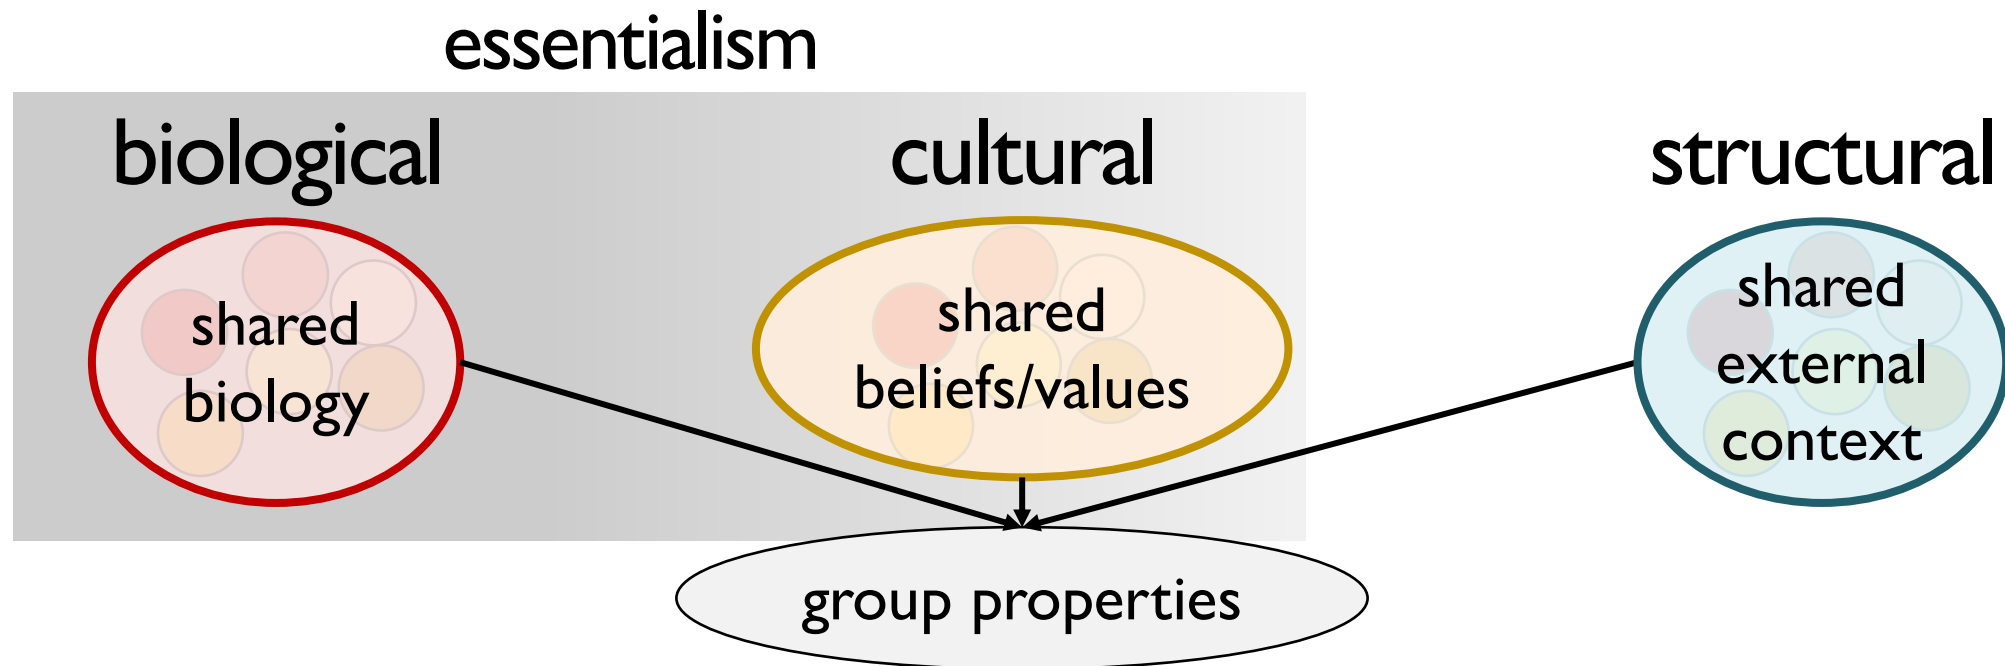

value-based essentialism: Bailey, Knobe & Newman (2021)

negative consequences of cultural explanations for groups' academic achievement: Sue & Okazaki (1990), Osajima (2005)

ground truth of structural over cultural explanations for gaps between groups' academic achievement: Kim (2002), wealth: Herring & Henderson (2016)

1) Could structural representations be a **more positive** alternative to essentialism?

2) Where does attributing properties to **group culture** fit in?

structural

look at their different consequences...

1) what is the case

- generalize based on group vs context

2) what should be the case

- attitudes towards non-conformity
- attitudes towards present disparity

3) how to change what is the case

- intervene on group vs context

reasoning about group differences

adults

5-8yo

Why does a group tend to eat certain foods?

type in
the chat!

?

group diet

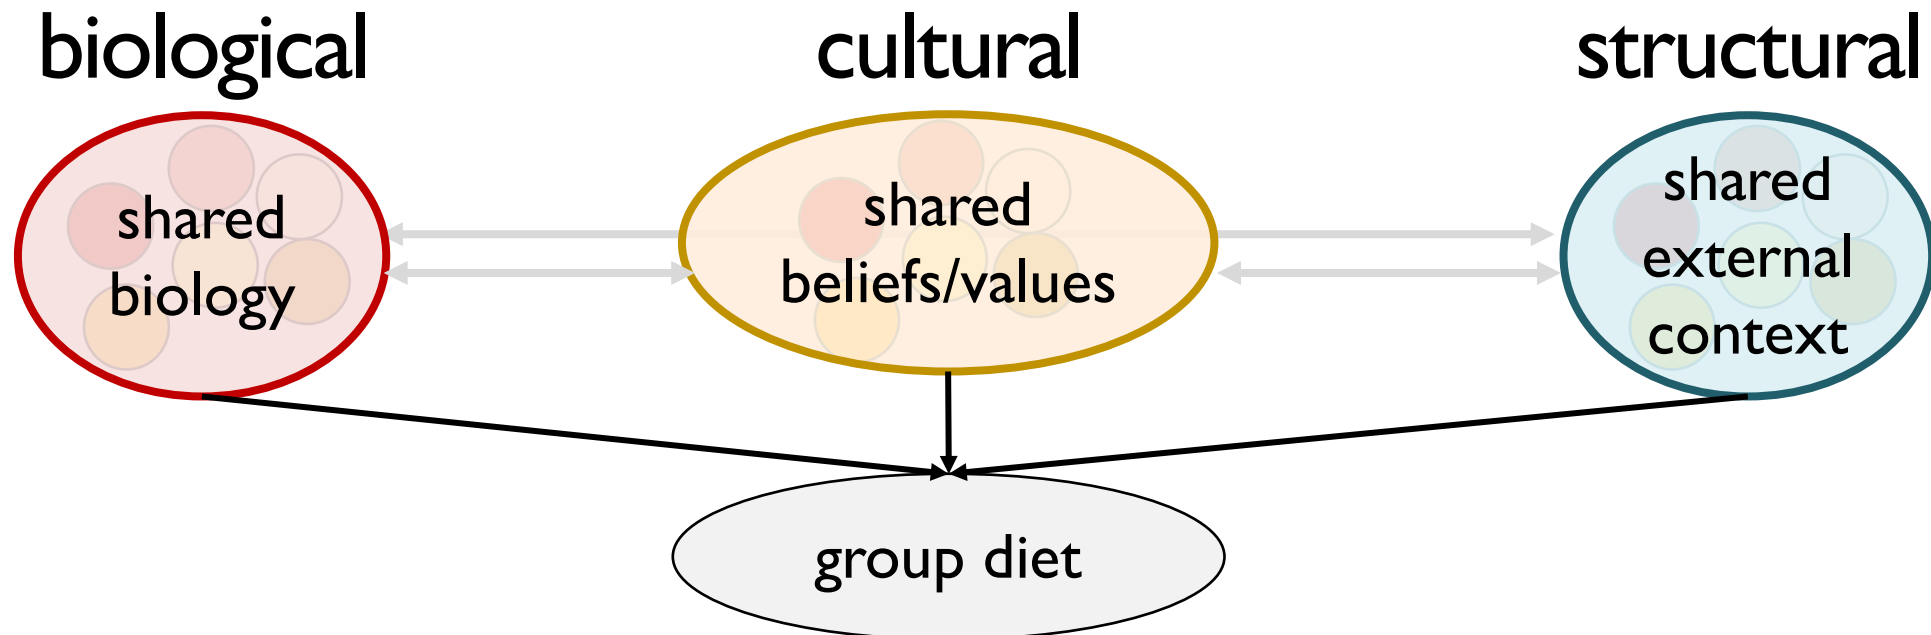

Why does a group tend to eat certain foods?

type in
the chat!

East Asian people & lactose
intolerance (LCT gene for lactase)
“Our bodies best digest...”
(folk biology)

religious beliefs
(eg vegetarian, halal, kosher)

Northern Chinese & noodles
Southern Chinese & rice
(climate for growing rice vs wheat)

Why does a group tend to eat certain foods?

group has characteristic **physiology** that make some foods **suitable or not suitable to eat**

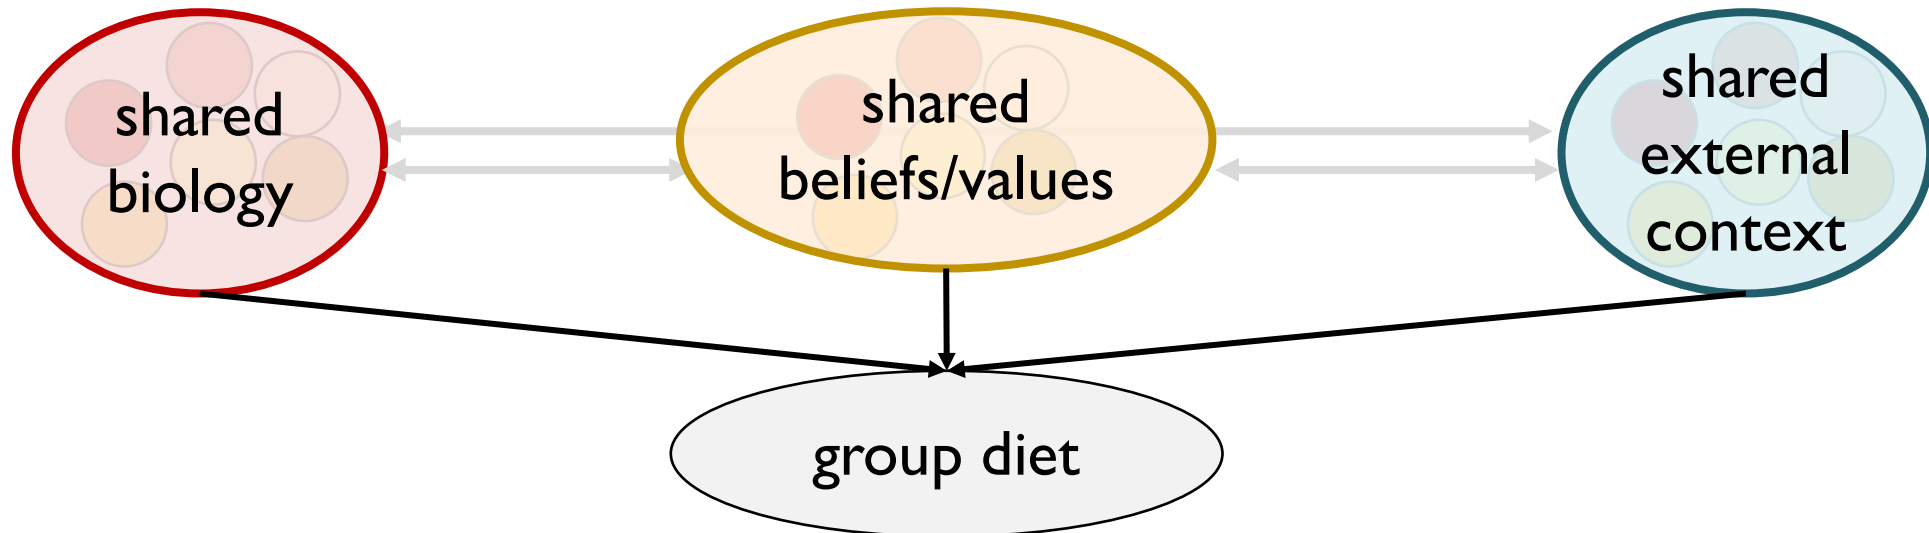

group has characteristic **shared beliefs, values** that make some foods **taboo**

group's **environment** makes some foods **available or not available**

allergies / intolerance

taboo food restrictions

what grows where

*group labels, pictures, berries counterbalanced for 5-8yo

*group labels, pictures, berries counterbalanced for 5-8yo

Zarpies live on this side of the planet.
Zarpies eat starberries.

Vawns live on the other side of the planet.
Vawns eat roundberries.

adults (n=167, ~55/condition)

5-8yo (n=67, ~22/condition)

*group labels, pictures, berries counterbalanced for 5-8yo

Zarpies live on this side of the planet.
Zarpies eat starberries.

Vawns live on the other side of the planet.
Vawns eat roundberries.

Because of the way their
bodies work, other berries
make them sick, so ...

allergies / intolerance

...Zarpies eat starberries.

Because they believe eating
other berries is bad luck, ...

taboo food restrictions

group diet

Because starberries are the
only berries that grow in
the area where they live, ...

what grows where

adults (n=167, ~55/condition)
5-8yo (n=67, ~22/condition)

look at their different consequences...

*presented in
fixed order: 2, 1, 3

1) what is the case

- generalize based on group vs context

2) what should be the case

- attitudes towards non-conformity

3) how to change what is the case

- intervene on group vs context

adults (n=167, ~55/condition)
5-8yo (n=67, ~22/condition)

structural representations could lead to...

1) *what is the case*

generalize based on context vs group

2) *what should be the case*

**less negative attitudes about
non-conformity**

3) *how to change what is the case*
intervene on context vs group

adults (n=167, ~55/condition)
5-8yo (n=67, ~22/condition)

what is the case: generalization

Look, here's another Zarpie... lives **on the other side of the planet**.

Which berries do you think this Zarpie eats?

(starberries/roundberries → for sure/maybe)

5-8yo

(n=67, ~22/condition)

adults

(n=167, ~55/condition)

modeled on switched-at-birth tasks:
e.g. Gelman & Wellman (1991)

structural reps: context-sensitive generalization in adults

Look, here's another Zarpie... lives **on the other side of the planet**.

Which berries do you think this Zarpie eats?

(starberries/roundberries → for sure/maybe)

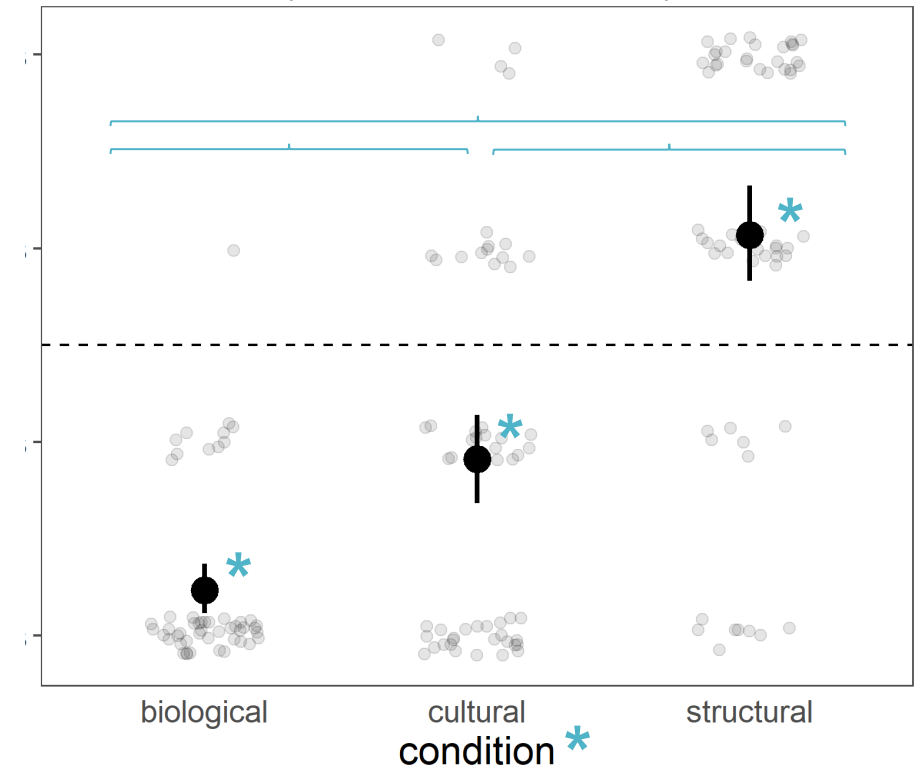

5-8yo

(n=67, ~22/condition)

adults

(n=167, ~55/condition)

* main effect of condition (lm controlling for difficulty of intervention); vs midpoint (two-sided t-test)
— differences between conditions (same lm with FDR-corrected pairwise comparisons)

● = 95% bootstrap CIs
○ = individual participants

what should be the case: attitudes about non-conformity

Look, this Zarpie is eating **roundberries**!

Is it **okay or not okay** for this Zarpie to eat roundberries?

(okay/not okay → a little/pretty/very good or bad)

5-8yo

(n=67, ~22/condition)

adults

(n=167, ~55/condition)

same measure from:

Roberts, Gelman & Ho (2016), Roberts, Ho & Gelman (2017)

structural reps: less negative attitudes about non-conformity

Look, this Zarpie is eating **roundberries**!
Is it **okay or not okay** for this Zarpie to eat roundberries?
(okay/not okay → a little/pretty/very good or bad)

5-8yo
(n=67, ~22/condition)

adults
(n=167, ~55/condition)

* main effect of condition (lm controlling for difficulty of intervention); vs midpoint (two-sided t-test)
— differences between conditions (same lm with FDR-corrected pairwise comparisons)

● = 95% bootstrap CIs
○ = individual participants

how to change what is the case: intervention

storm blew away starberries (5-8yo) / starberry harvest failed this year (adults)

We'll need to get the Zarpies to eat roundberries instead.

If you could make anything happen, **what could we do** (5-8yo) / **what would you do** (adults),
so that the Zarpies can eat roundberries? (open-ended)

how to change what is the case: intervention

If you could make anything happen, **what could we do** (5-8yo) / **what would you do** (adults), **so that the Zarpies can eat roundberries?** (open-ended → 2 independent coders blind to condition)

	5-8yo (85% agreement, $\kappa = 0.81$)	adults (94% agreement, $\kappa = 0.92$)
 change group biology	give them a pill or medicine have them eat a little at a time	give them a pill or medicine have them build tolerance
 change group beliefs/culture	tell them the berries are good luck	convince them it's not bad luck
 change environment (increase food access)	get them roundberries from other side ask the Vawns to share roundberries	grow, plant, or import the other berry have them visit the other side of the planet
 change the food	turn them into starberries take the stuff they can't eat out	prepare the berries so they are safe to eat
 other	find more starberries do nothing	don't know

structural reps: interventions on structural context

If you could make anything happen,
what could we do (5-8yo) / what would you do (adults)
so that the Zarpies can eat roundberries?

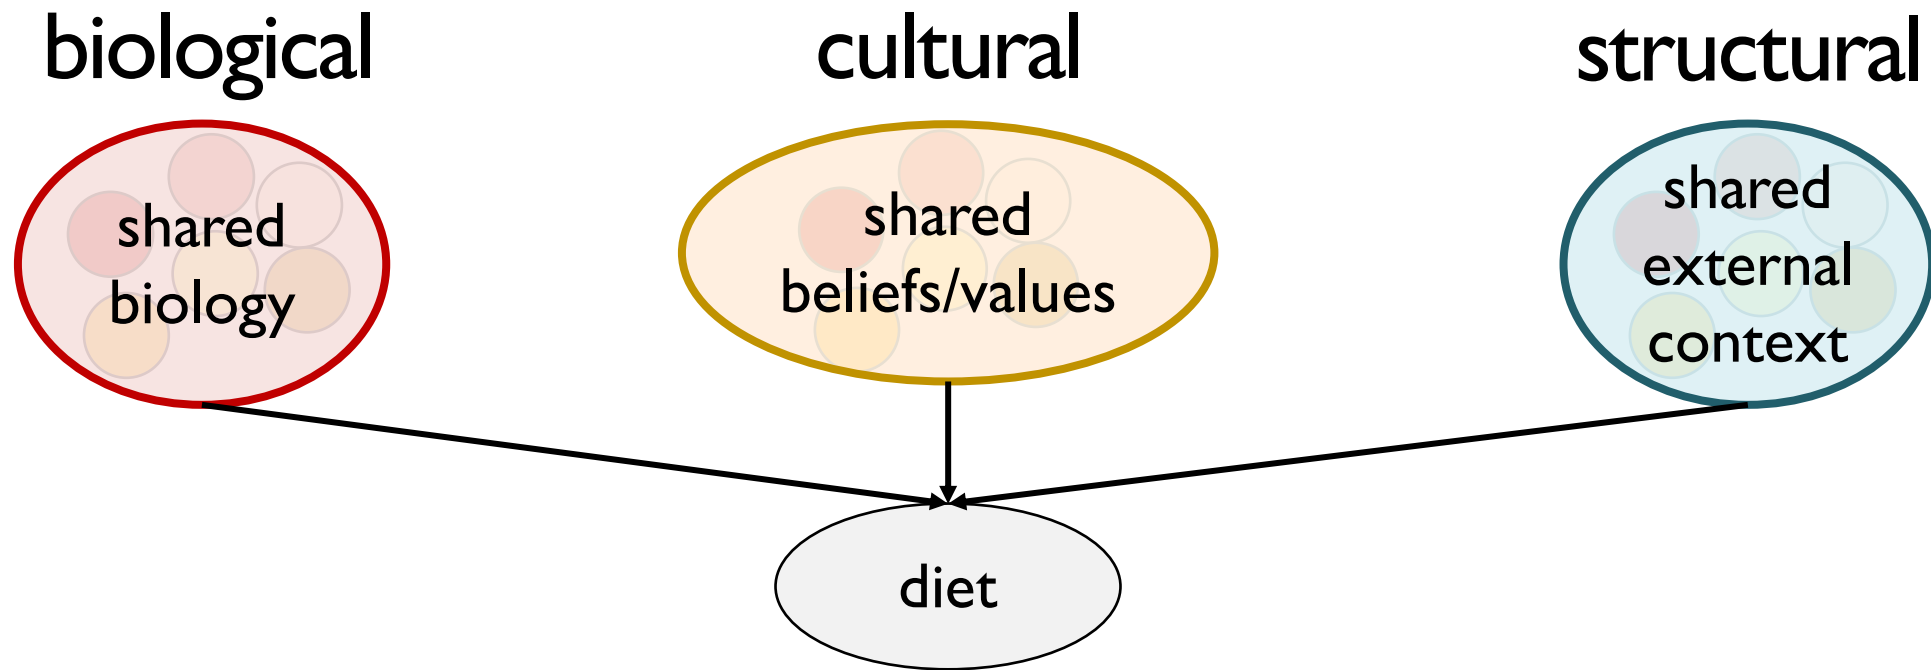

* interventions differ across conditions (Fisher's exact test), __ intervention differs across conditions (lm ctrl'ing for difficulty of intervention)
— intervention differs across conditions (same lm with FDR-corrected pairwise comparisons)

difficulty of intervention was controlled for in other analyses

Would it be easy or hard to do that? (5-8yo) (easy/hard → very/a little)

How easy or difficult would it be to do the action you suggested above? (adults) (easy/difficult → very/somewhat)

structural representations lead to:

what is the case

context-sensitive generalization (for adults)

what should be the case

**less negative attitudes about
non-conformity**

how to change what is the case

interventions on structural context

Amy Miyahara
Stanford BA '23

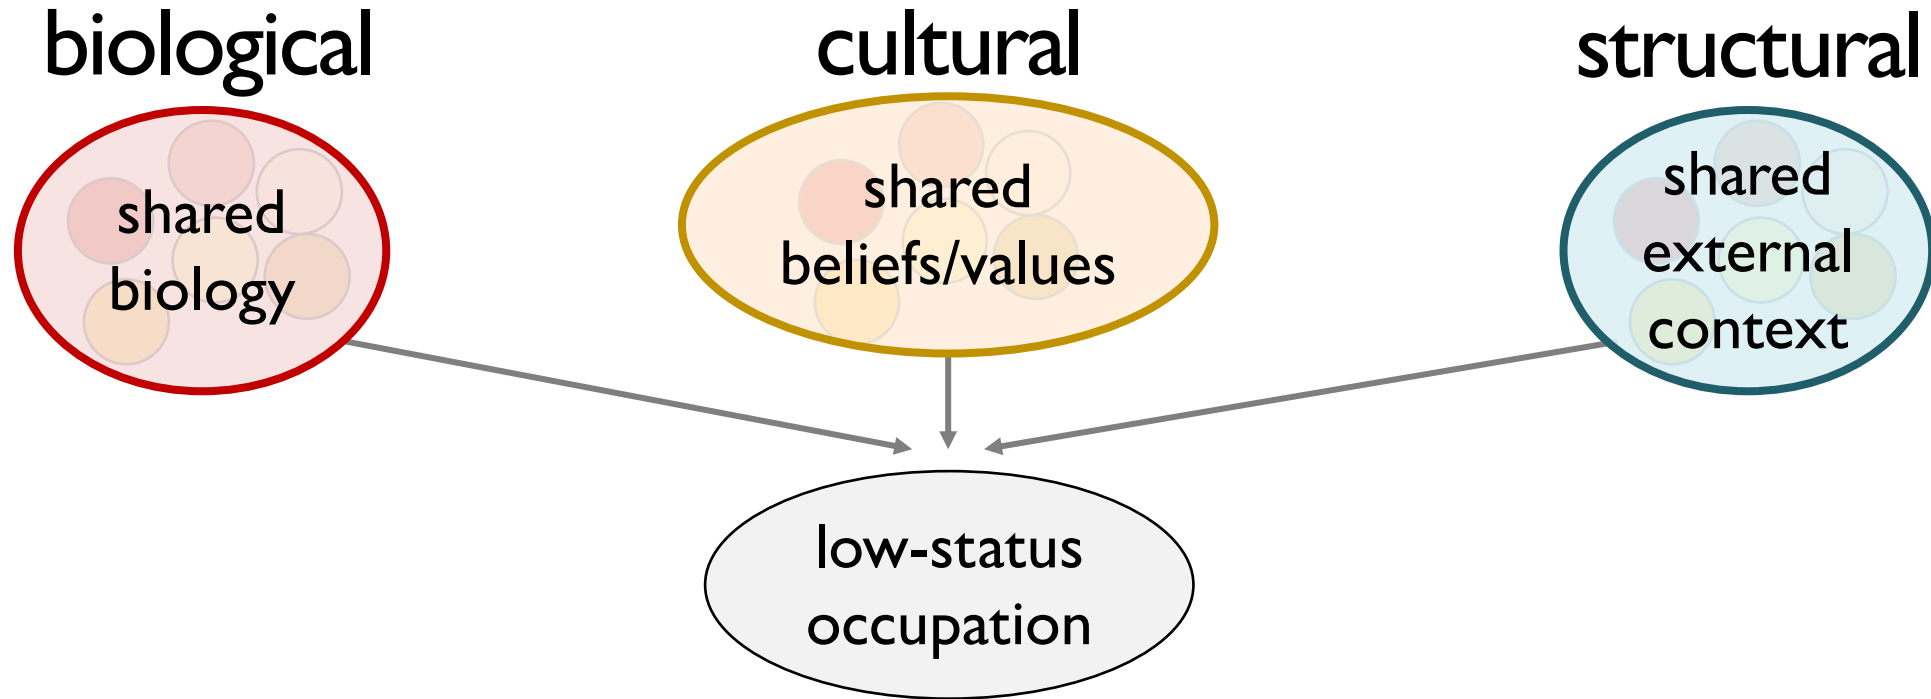

reasoning about micro-level group disparities

adults

7-8yo

induce one of these construals...

look at their different consequences...

what is the case

generalize based on group vs context

how to change what is the case

intervene on group vs structural conditions

what should be the case

attitudes towards non-conformity

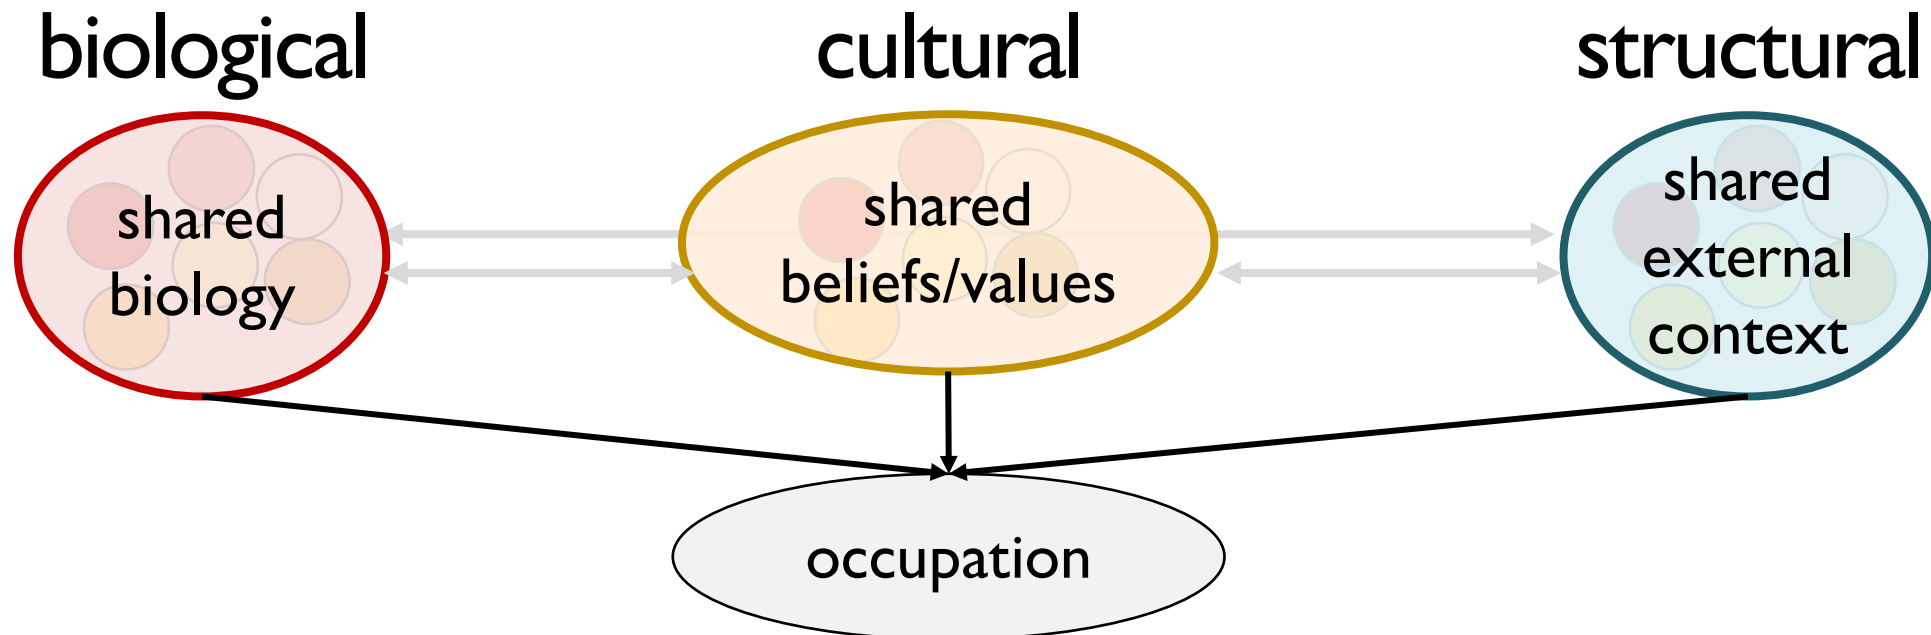

attitudes towards present disparities

Why does a group tend to work a certain job?

women & factory work
("nimble fingers",
also "detail-oriented", "docile")

Jews & banking
("stingy", "greedy",
"materialistic")

Chinese-Americans &
restaurants (language barrier,
limited resources, stereotyping,
economic discrimination)

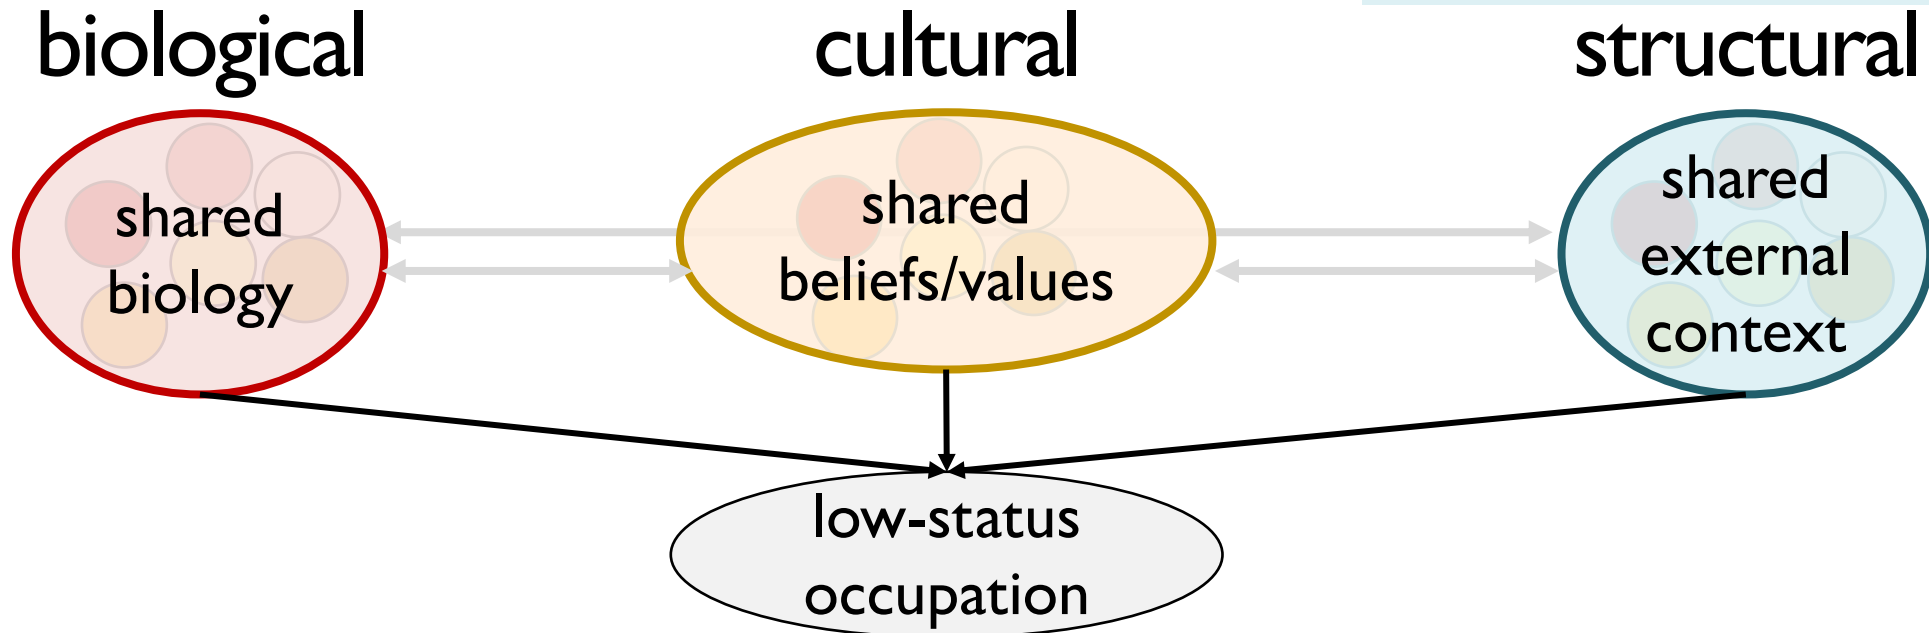

Why does a group have a certain occupation?

group has characteristic **physiology or biological traits** that make them suited to the job

group has characteristic **shared beliefs, values, traditions** that match the job

group faces **barriers, constraints, economic discrimination** that leaves them with few other options than the job

Smorgsville has a bakery that both Reds and Blues work at.

In this bakery, everyone works one of two jobs. You can either decorate cakes or clean the bakery.

Reds work as cake decorators.

At Smorgsville's bakery, all Reds decorate cakes. Decorating cakes is **creative and a lot of fun**, and people always tell the Reds how pretty their cakes are. Sometimes, the Reds get to **taste the cakes!**

Let's see how many coins Reds get for decorating cakes.... Reds get **10 coins** for decorating cakes.

Blues work as cleaners.

At Smorgsville's bakery, all Blues are cleaners. They have to sweep the floor, scrub the counters, and wash all of the dishes. It is **hard work, and not that fun**. Blues **do not get to taste the cakes**.

Let's see how many coins Blues get for cleaning the bakery.... Blues get **1 coin** for cleaning the bakery.

occupational
disparity

MTurk: adults (n=98, ~33/condition)
Zoom: 7-9yo (n=66, ~22/condition)

low-status*
occupation

Blues clean the bakery because...

*adults consider the more negative outcome to be
in need of explanation (Wong & Weiner, 1981)

Blues are **born with strong arms and strong bodies**. Their **strong bodies make them very good at cleaning**, since it takes strength to wash the floor and scrub the pots.

Blues and their parents and their parents' parents have been cleaning bakeries for a **long time**. They really **like things clean** and **think it is important for everything to be clean**. Blues **teach their children** how to clean when they're kids.

Blues are **not allowed** to decorate cakes in bakeries. **Their city has a rule** that only Reds can decorate cakes. Blues **aren't allowed to go to the school that teaches** you how to decorate cakes. This situation leads Blues to clean bakeries instead.

adults (n=98, ~33/condition)
7-9yo (n=66, ~22/condition)

what is the case: generalization

This Blue **doesn't live in Smorgsville**. This Blue was born and raised in Flooftown, with **different rules about who works in bakeries**. This Blue works at a bakery here in Flooftown. What job do you think this Blue works in Flooftown?

7-9yo

(n=66, ~22/condition)

adults

(n=98, ~33/condition)

modeled on switched-at-birth tasks:
e.g. Gelman & Wellman (1991)

what is the case: generalization

This Blue **doesn't live in Smorgsville**. This Blue was born and raised in Flooftown, with **different rules about who works in bakeries**. This Blue works at a bakery here in Flooftown. What job do you think this Blue works in Flooftown?

7-9yo

(n=66, ~22/condition)

adults

(n=98, ~33/condition)

* main effect of condition (lm controlling for difficulty of intervention); vs midpoint (two-sided t-test)

— differences between conditions (same lm with FDR-corrected pairwise comparisons)

● = 95% bootstrap CIs

○ = individual participants

what should be the case: endorsement of present disparity

Is it **okay or not okay** that Blues clean bakeries and Reds decorate cakes?
(okay/not okay → {very, pretty, a little} good/bad)

7-9yo
(n=66, ~22/condition)

adults
(n=98, ~33/condition)

structural representations decrease endorsement of disparities

Is it **okay or not okay** that Blues clean bakeries and Reds decorate cakes?
(okay/not okay \rightarrow {very, pretty, a little} good/bad)

* main effect of condition (lm controlling for difficulty of intervention); vs midpoint (one-sample t-test)
— differences between conditions (same lm with FDR-corrected pairwise comparisons)

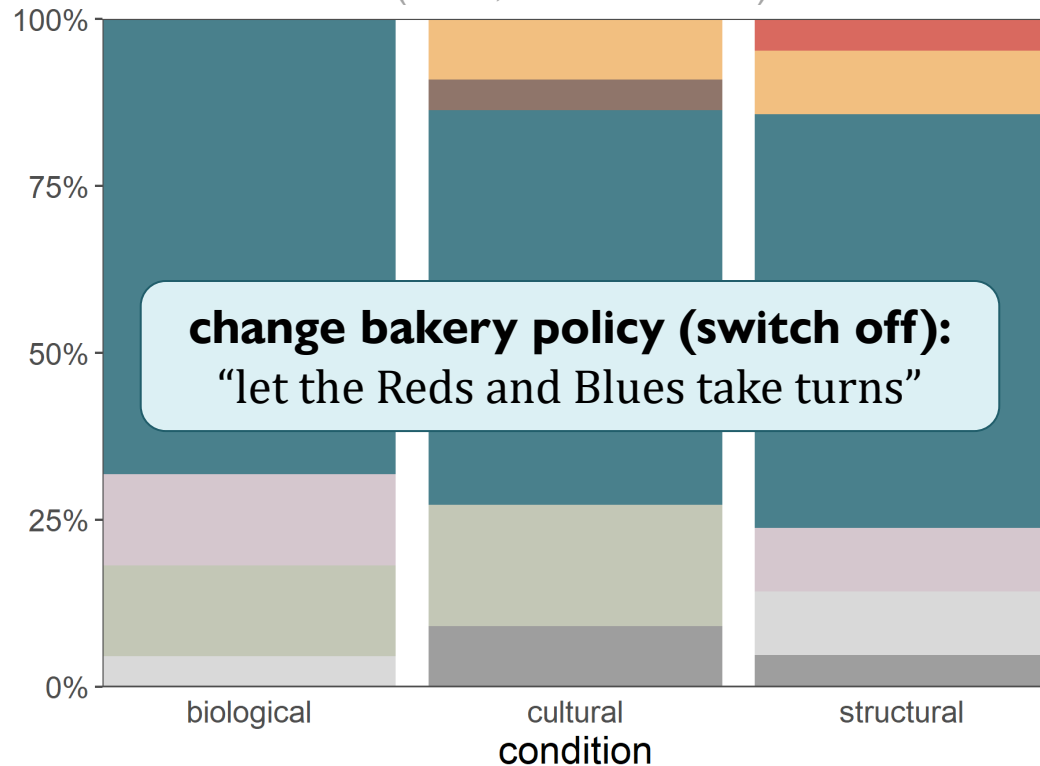

● = 95% bootstrap CIs
○ = individual participants

structural reps help adults suggest structural interventions

I think decorating cakes is a much better job than cleaning bakeries – you get lots of coins, it’s very fun, and you get to taste the cakes! Let’s see if we can help the Blues out and have more of them decorate cakes!
If you could make anything happen, what would you do to have more Blues decorate cakes?

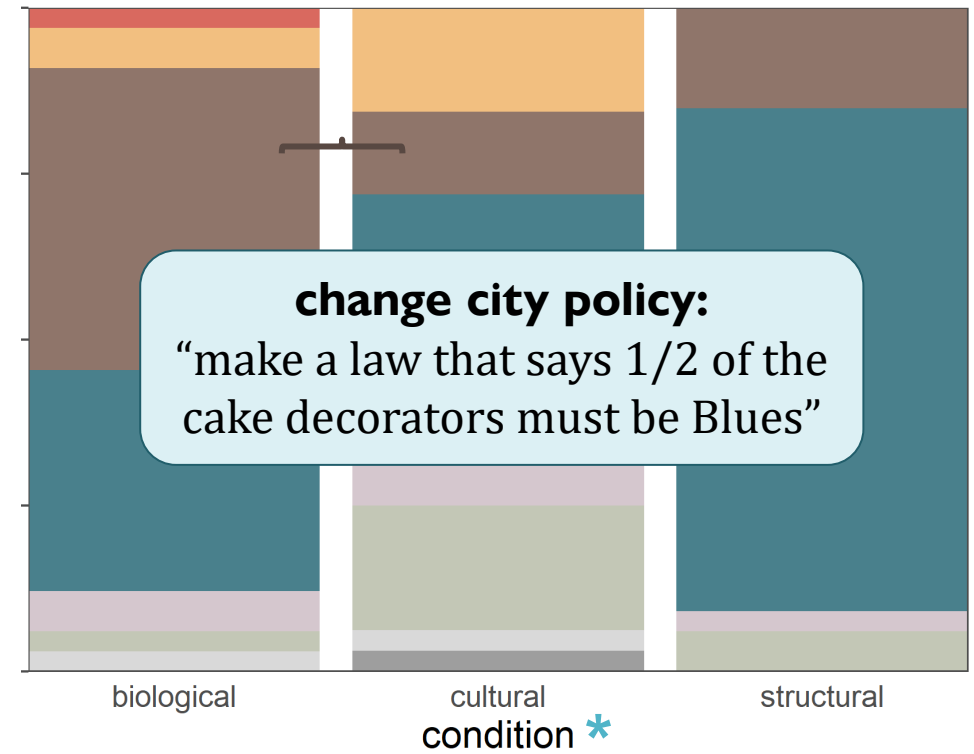

7-9yo

(n=66, ~22/condition)

adults

(n=98, ~33/condition)

* interventions differ across conditions (Fisher’s exact test), __ intervention differs across conditions (lm ctrl’ing for difficulty of intervention)
 — intervention differs across conditions (same lm with FDR-corrected pairwise comparisons)

reasoning about macro-level group disparities

adults

Vawns work as managers at a food distributing company.

Vawns sell and ship a variety of food grown on the island, including aquafruit and many other kinds of fruit and foods.

Vawns earn a **comfortable wage** working as distribution managers. Working as a distribution manager is a relatively **low risk** job.

Zarpies work as aquafruit farmers.

Aquafruit are fruit that grow underwater off the coast of islands in this area.

Zarpies dive into the ocean near the island to harvest aquafruit. Zarpies are **paid very little** for harvesting aquafruit. Harvesting aquafruit can also be **dangerous**, because there are many sharks in the water.

occupational
disparity

low-status
occupation

Zarpies work as aquafruit farmers, and don't often work other jobs.

This is because Zarpies see better in the water than on land, their bodies are streamlined and powerfully built, and they have big hands and feet that are good for swimming, from even early in childhood.

Zarpies' bodies are well-suited to farming aquafruit.

This is because Zarpies grow aquafruit by tradition, have passed down knowledge of how to farm aquafruit to their children for generations, and feel a special attachment to the ocean.

Zarpies' traditions and values are well-suited to farming aquafruit.

This is because Zarpies are required by this island's government to fill out complex and expensive paperwork to be hired in other jobs, which limits economic opportunities for Zarpies.

This situation leads Zarpies with little other choice than to farm aquafruit.

what is the case: generalization

Look, here's another Zarpie! This Zarpie does not live on the island of Zarpies and Vawns. This Zarpie was born and raised in a different island country, with a different government, different employment policies, and different groups of people. They live and work in that different island country.

What job do you think this Zarpie works in their country?

structural reps lead to more context-sensitive generalization

Look, here's another Zarpie! This Zarpie does not live on the island of Zarpies and Vawns. This Zarpie was born and raised in a different island country, with a different government, different employment policies, and different groups of people. They live and work in that different island country.

What job do you think this Zarpie works in their country?

● = 95% bootstrap CIs

○ = individual participants

(n=90 adults, ~30/condition)

* main effect of condition (lm controlling for difficulty of intervention); vs midpoint (one-sample t-test)

— differences between conditions (same lm with FDR-corrected pairwise comparisons)

what should be the case: attitudes about present disparities

Is it okay or not okay that Zarpies mostly work as aquafruit farmers and Vawns mostly work as distribution managers?

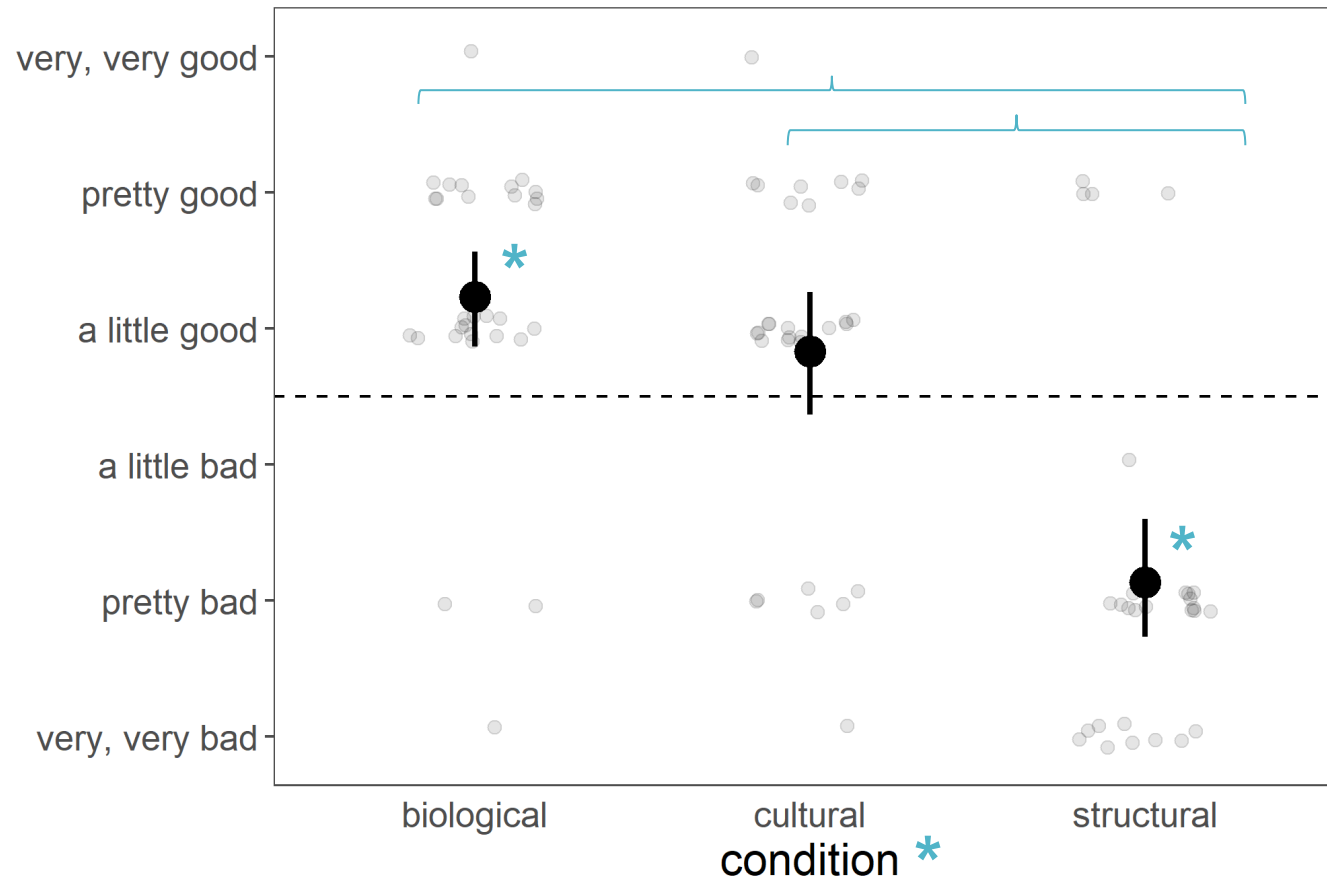

(okay/not okay → a little/pretty/very, very good or bad)

structural reps decrease endorsement of disparities

Is it okay or not okay that Zarpies mostly work as aquafruit farmers and Vawns mostly work as distribution managers?

(okay/not okay → a little/pretty/very, very good or bad)

* main effect of condition (lm controlling for difficulty of intervention); vs midpoint (one-sample t-test)
— differences between conditions (same lm with FDR-corrected pairwise comparisons)

● = 95% bootstrap CIs
○ = individual participants
(n=90 adults, ~30/condition)

how to change what is the case: intervention

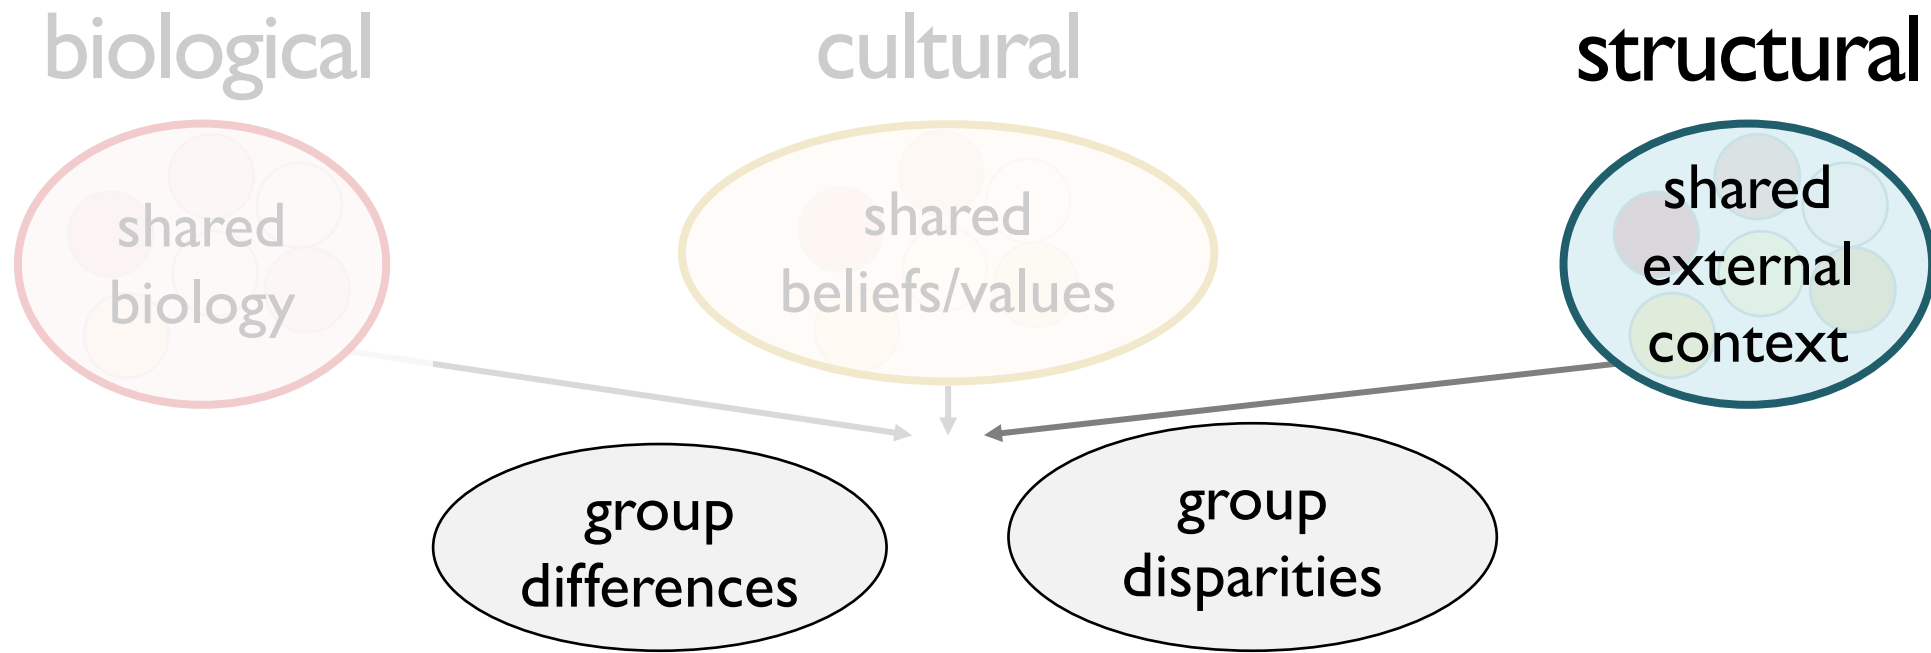

The island government would like to get more Zarpies to work as distribution managers, rather than aquafruit farmers. **If you could make anything happen, what would you do to get the Zarpies to work as distribution managers?** Please list 1 specific action you would do, and please be as specific as possible. The more specific you can be, the better. What would you do/change and how?

structural reps suggest structural interventions

* interventions differ across conditions (Fisher's exact test), __ intervention differs across conditions (lm ctrl'ing for difficulty of intervention)
__ intervention differs across conditions (same lm with FDR-corrected pairwise comparisons)

structural representations as a positive alternative to essentialism

what is the case

more context-sensitive generalization

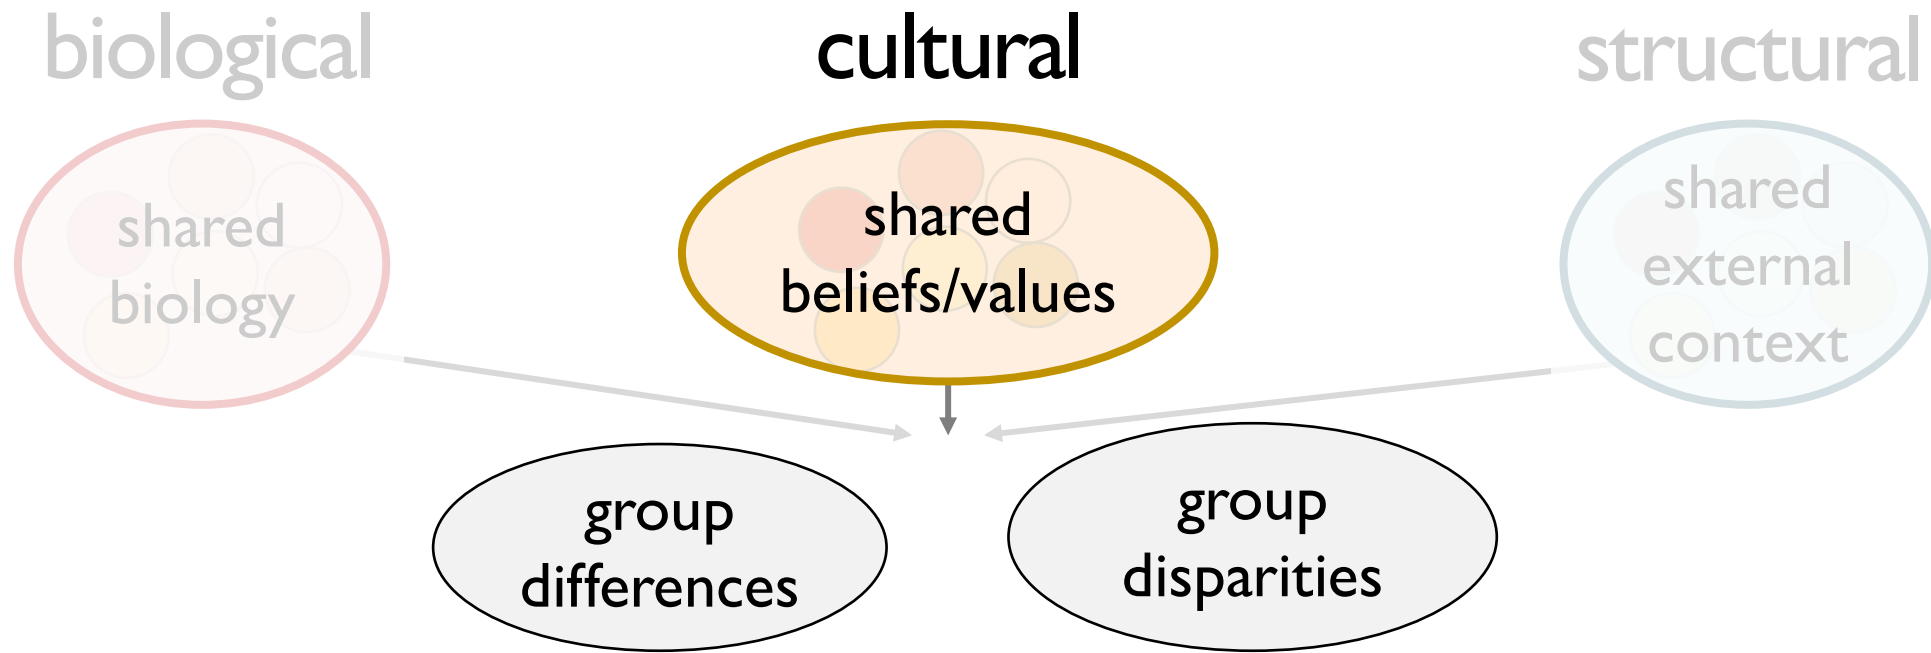

how to change what is the case

more structural interventions

what should be the case

more positive attitudes about
non-conformity

less endorsement of present disparities

cultural representations as an intermediate
or even extreme form of essentialism

what is the case

what should be the case

how to change what is the case

how *should* we represent
group differences?

essentialism

biological

Category members share a
stable external context.

structural

ground truth of group differences/disparities often involves structural causes... but also complex interactions

...the most common occupations among Indian women are software developers and physicians—two typically high-wage occupations—while the top occupations among Vietnamese women are manicurists and hairdressers, which are typically low-wage occupations.

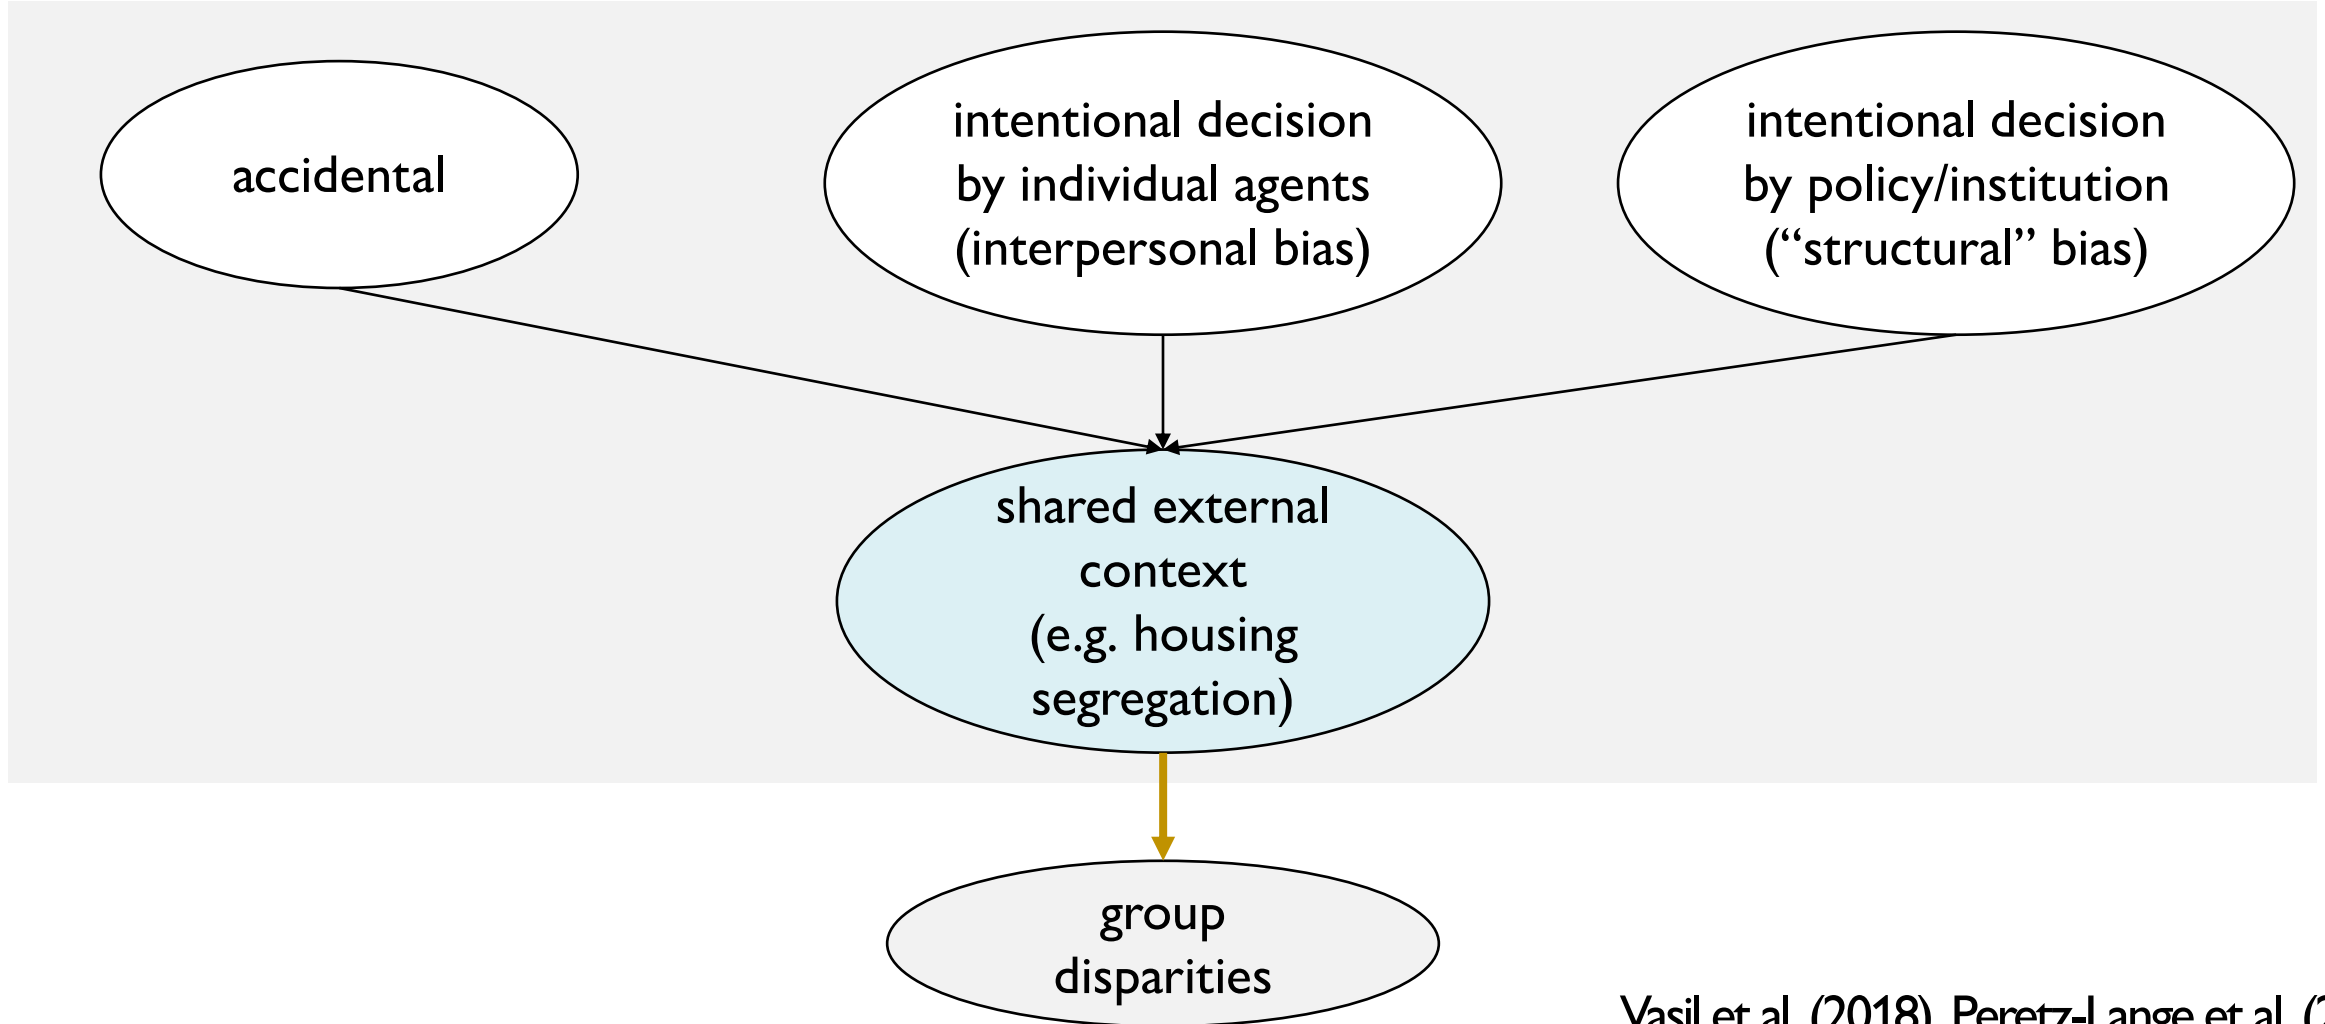

Some factors driving these differences among subpopulations may include cultural differences, differences in immigration patterns and generational wealth, and persistent biases around gender, race, ethnicity, nationality, and language.

Center for American Progress (2021). *The Economic Status of Asian American and Pacific Islander Women*.

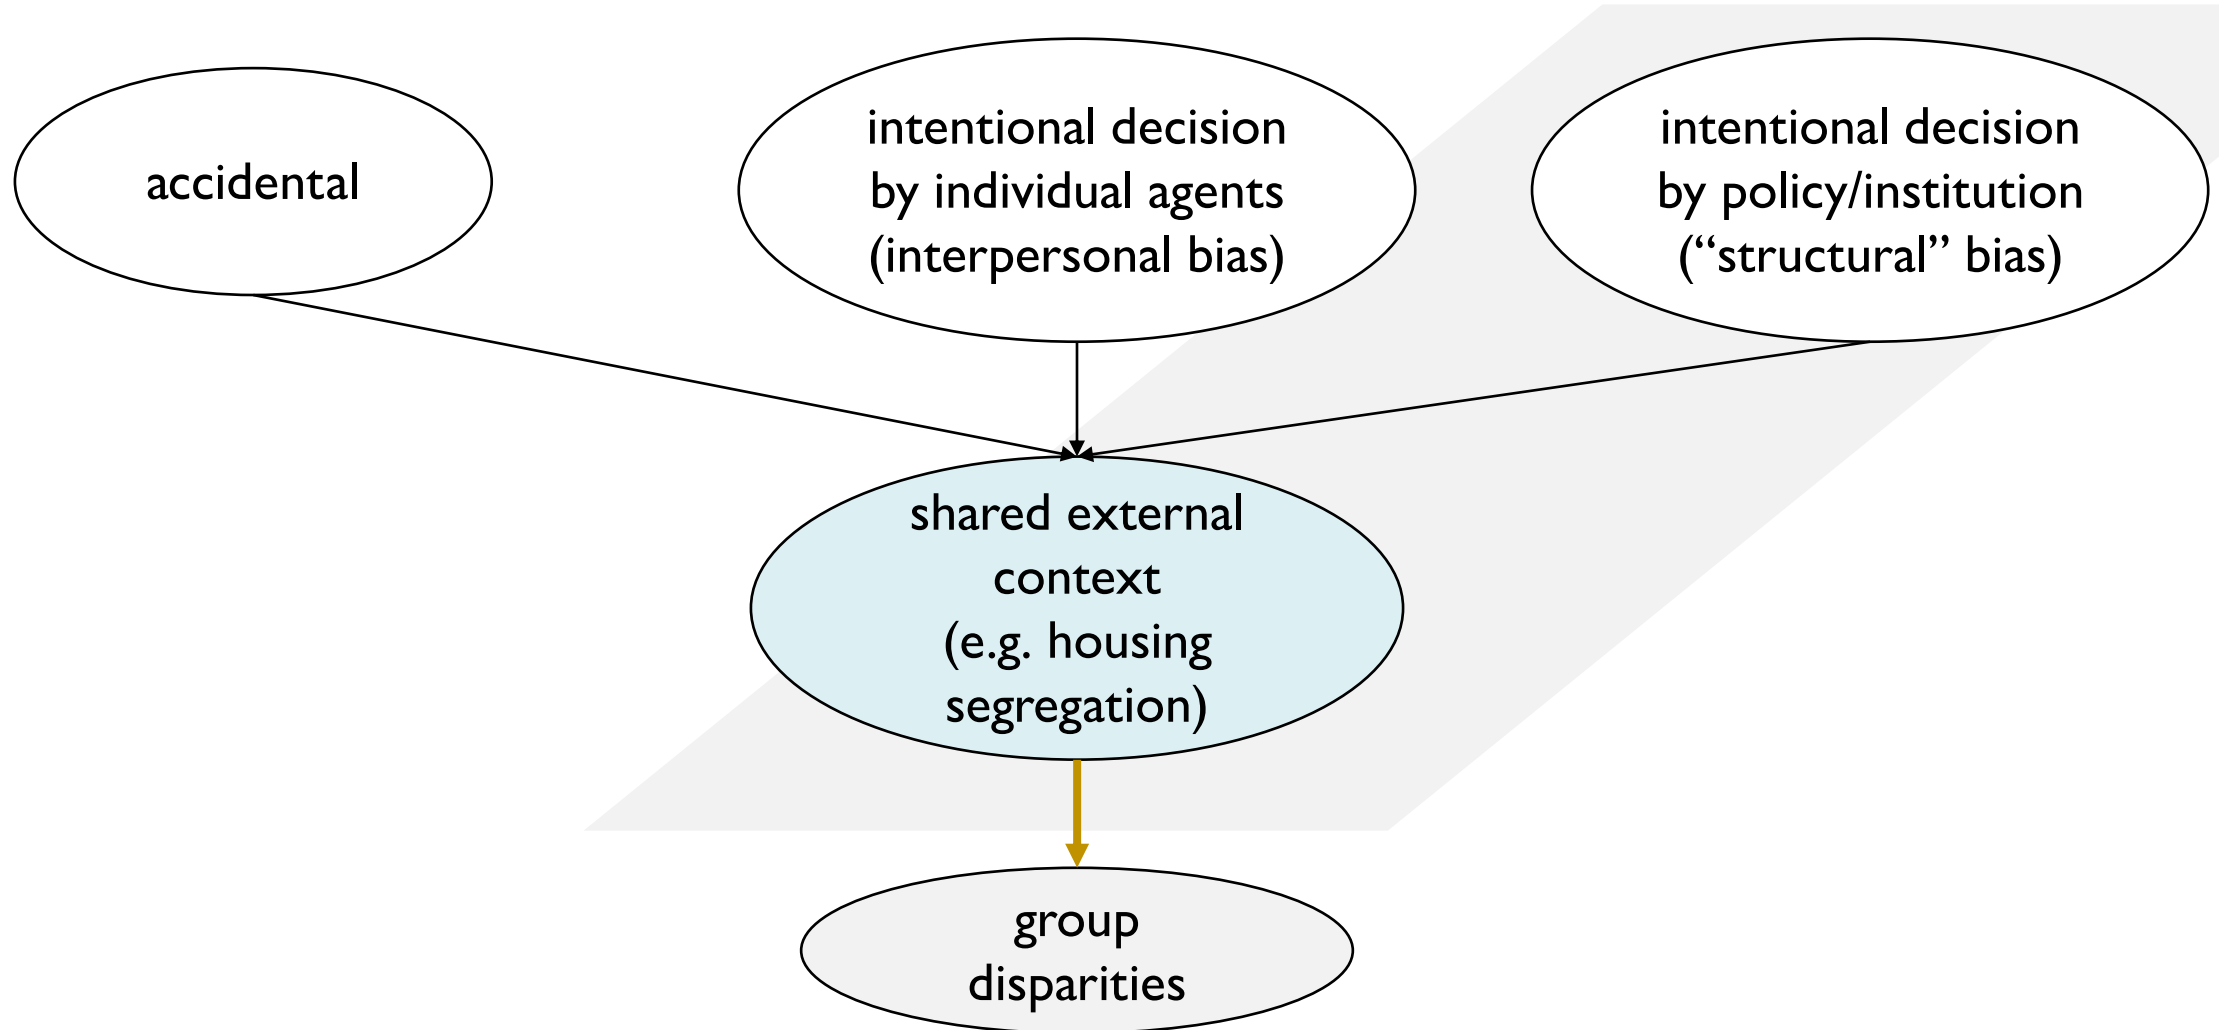

the origins of structural context (what do we mean by structural?)

structural (a *stable* external context)

the origins of structural context (what do we mean by structural?)

structural (rooted in social structure: *laws, institutions, power*)
